

HEINRICH KIPP WERK

SPECIAL SOLUTIONS

CUSTOMER-SPECIFIC SOLUTIONS

Economy on demand

HEINRICH KIPP WERK has been a quality partner to industry for 100 years. We offer a comprehensive product spectrum with more than 75,000 elements: clamping technology, standard elements and operating parts.

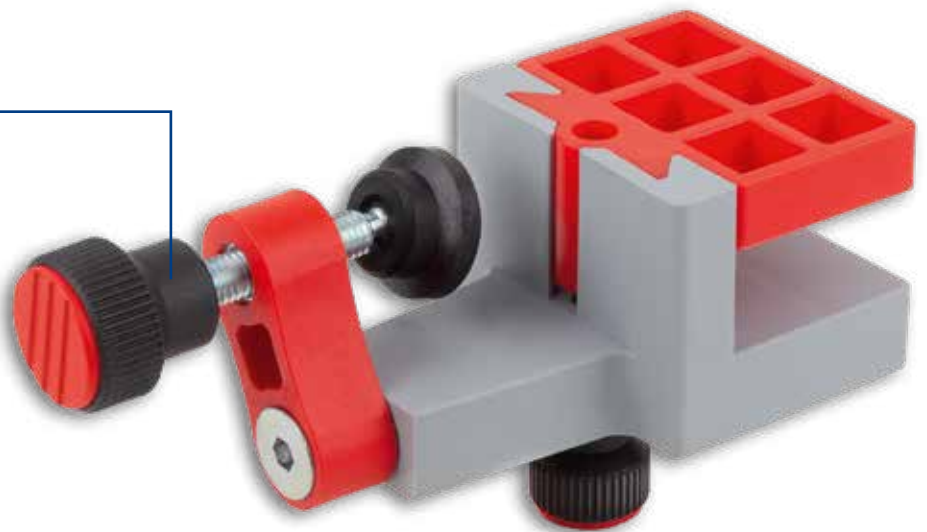

When this extensive product range reaches its limits, KIPP becomes individual. Customer-specific tasks reveal the dimension of our experience, customer orientation and development competence.

The basis is our high vertical range of manufacture. This means that assemblies and individual parts can be implemented as special solutions at any time, exactly as specified. Our customers receive everything from a single source - from consultation and quote preparation, through feasibility analysis and development, to series production.

Benefit from the diversity of KIPP's manufacturing expertise.
And benefit from time and cost savings thanks to
the perfect solution.

MANUFACTURING EXPERTISE

Quality from KIPP

With state-of-the-art machinery and a high level of vertical integration, we guarantee you the security of a strong partner for customised solutions.

KIPP produces in Germany. Our development department and in-house toolmaking department ensure the professional realisation of customer-specific projects. The production processes on our modern machines are certified and are subject to continuous optimisation processes. The same applies to the processes of our flexibly designed assembly stations.

The advantages for you are obvious:

Highest quality, customer-orientated flexibility and on-time availability. This applies to prototype construction as well as series production.

In our machine shop are metal cutting, injection molding and zinc die-casting machines.

Our own R&D department and toolmaking workshop ensure a professional realisation of special projects.

Completely assembled and, if desired, with treated surface. Technicians accompany every single project - from offer preparation to feasibility assessment and through to completion.

INDUSTRY EXPERIENCE

Your competitive edge counts

KIPP is a development partner for a wide range of industries and specialises in customer-specific parts - from individual operating elements to complex functional assemblies.

Our industry expertise is based on the knowledge of our highly qualified employees. Their technical creativity and sound experience are success factors in development, production and service.

We are familiar with industry-specific requirements and have a high level of technological potential. Customers also benefit from our expertise in many fields of application, such as the automotive and supplier industry, mechanical engineering, woodworking, the food and packaging industry, medical technology, assembly and intralogistics as well as the sports and rehabilitation sector.

FROM CONSULTATION TO REALISATION

One contact for your solutions

Whether a standard part modified and individualised according to your requirements or a completely new customer-specific development - KIPP guarantees efficient project handling in a spirit of partnership.

Based on our product standards, we offer modifications that are required for your application sector. Naturally, cost-optimised and according to customer specifications. For unusual requirements, we develop completely individual, tailor-made solutions. Together with you, we check the operating conditions, provide you with reliable advice and design the optimum product. For seamless communication, a contact person is available to you from the beginning to the end of the project.

EXAMPLES CUSTOMER-SPECIFIC SOLUTIONS

Clamping ring with eccentric lever

Task:

Realisation of a clamp for a steering column.

Solution:

Production of a slotted clamping ring with eccentric clamping.

Customer benefit:

The customer's clamping point can be operated without tools.

Clamping levers mini

Task:

Development of a plastic clamping lever according to our customer's specific design specifications.

Solution:

Production of an individual plastic injection moulding tool to realise the clamping lever mould.

Customer benefit:

More user-friendly clamping thanks to the new design - clamping lever in our customer's corporate design.

Stainless steel screw

Task:

Further development of a stainless steel screw customer request.

Solution:

Stainless steel screw with centring cone and captive pressure disc.

Customer benefit:

More corrosion-resistant screw and simplified assembly of the components.

Locking switch

Task:

Development of a special function according to customer specifications.

Solution:

Production of a very complex assembly.

Customer benefit:

Replacement for components no longer available on the market.

Spring plungers

Task:

Development of a spring pressure piece according to customer design.

Solution:

Production of the pressure piece according to the developed design.

Customer benefit:

Uncompromising use of the component.

Stud

Task:

Realisation of a required design in a turned part

Solution:

Production of the turned part according to customer guidelines.

Customer benefit:

Customised function screw.

The KIPP team for customised solutions will be happy to support you!
