Catalogue Content Information, Definitions & Benefits;

* In order to use product correctly, we presented information. Our aim is to ensure that our customers use our products correctly.
* We have designed products with technical drawings. We have tried to determine where you should use the product with schemes or practical information.
* In order to use the products correctly, we have explained precautions. Also, we have specified the disadvantages.
* We divided the mould group inside the catalogue into two group (2 INDEX), PART 1 **PRESS MOULD GROUP Until Page 200and PART 2 INJECTION MOULD GROUP From Page 200 to Page 336.**
* We presented the products according to the order of usage.
* We have classified products as quality and economically.
* We have presented quite technical information of the products. We have put accurate and quality products with plenty of options. The selected products are selected by our engineers punctiliously according to the mould system.
* We have specified possible adverse effects of products on human health or we have taken care to select accurate ineffective products.
* We have endeavored to reply to your demands especially with mould materials and other tolls at your workshop or your factory.
* **This way, we prove that the correct products that you bought are the cheapest ones (while you are using them).**

Our Customer Services;

* During standard mould components, please provide order codes with our company's related department by measuring technical drawings inside special production catalogue or informing drawing data.
* At your orders, we recommend you to use fax or e-mail for right transactions **(Pls. don't give order on phone)**. Price offers or your orders are replied / delivered during the day.
* Conversation right of technical information in our catalogue according to the current conditions, is reserved by our company.
* Since we published our latest catalogue, all our previous catalogues have lost their validity.
* The Most Important Advantage of Competition is quality human resource. We consider learning for success as a cultural phenomenon. We are at your service together with our whole team; we provide solution rapidly but still expect some tolerance, even homes nods.
* Hundreds of world brands and thousands of product range save money & time with Quick Supply System from a single address. You can spend more time to your business, calculate once and feel comfortable.

GTH Coding / Identification Table of Products in Our Mould Components Production

Product Code	Page No	GTH Mould Components Product Definition
G.01	21	Guide Pillar With Collar- Ford
G.02	21	Guide Pillar - Ford
G.03	23	Guide Pillar - Cnomo
G.04	22	Guide Pillar - PSA
G.05	22	Guide Perforated Pillar-PSA
G.06	20	Guide Pillar-FIAT
G.07	20	Guide Perforated Pillar-FIAT
G.08	25	Scraper Ball - Guide Pillar
G.09	19	Guide Pillar - Slotted
G.10	17	Guide Pillar-With Centre Collar
G.11	29	Lubricated Guide Pillar
G.12	36-37	G.12/D Guide Pillar
G.13	33-35	With Collar - G.13/D Guide Pillar
G.14	31	Threaded Core Guide Pillar
G.15	16	Thickbacked Guide Pillar AKK
G.16	32	Injection Back Striker
G.17	28	Plain Guide Pillar
G.18	30	Guide Pillar - Ball
G.19	18	Guide Pillar - Ball
G.20	24	Cast Block Guide Pillar
G.21	30	Ejector Plate, Support Guide Pillar
G.22	27	Guide Pillar Protection Flange
G.23	27	Sheet Lifting Guide Pillar
G.24	18	Plain, Threaded Guide Pillar
G.25	41	Self-lubricating, SB Bush
G.26	40	Self-lubricating, OFB Bush
G.27	41	Self-lubricating, KSB Bush
G.28	38	Steel, Retaining Pin
G.29	43	OFB Ejector Ball Bush
G.30	39	Steel, Guide Bush
G.31	38	Steel, With Collar Bush
G.32	39	Steel, OFB Bush
G.33/ K	48/49	Long Steel Thin Bushes
G.34/ K	48/49	Short Steel Thick Bushes
G.35	47	Steel, Bronze Long Bush
G.36	47	Steel, Bronze Short Bush
G.37	44	Steel, Ball Long Bush
G.38	44	Steel, Ball Short Bush
G.39	136	6 Guide Screws/Locking
G.40	53	Self-lubricating F. Bush NAAMS
G.41	52	Self-lubricating C. Bush CNOMO
G.42	53	Self-lubricating C. Bush NAAMS
G.43	52	Self-lubricating Slit Bush VDI
G.44	51	Self-lubricating Guide Bush with Collar DIN
G.45	51	Self-lubricating Guide Bush DIN
G.46	73	Conical Locking Guide Screw
G.47	83	Threaded Set Eyebolt VDI
G.48	40	Self-lubricating Plain Bush
G.49	50	Short, Steel Self-lubricating Bush
G.50	50	Long,Steel Self-lubricating Bush
G.51	84	FORD Mould Bearing Shaft

Product Code	Page No	GTH Mould Components Product Definition
G.52	84	VDI Mould Bearing Shaft
G.53	85	Transport Brackets FIAT
G.54	83	Threaded Core DIN / ISO
G.55	84	FIAT Bearing Shaft
G.56	86	FIAT Safety Pins

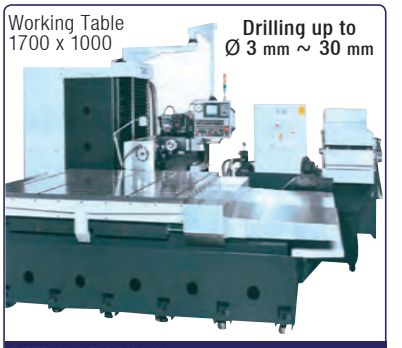
EKS

STANDARD Guide Pillar & Bushes and Bolted Con.
PROCESSING Injection Ready Sets (From 01up to 67)

EDS **ESI**

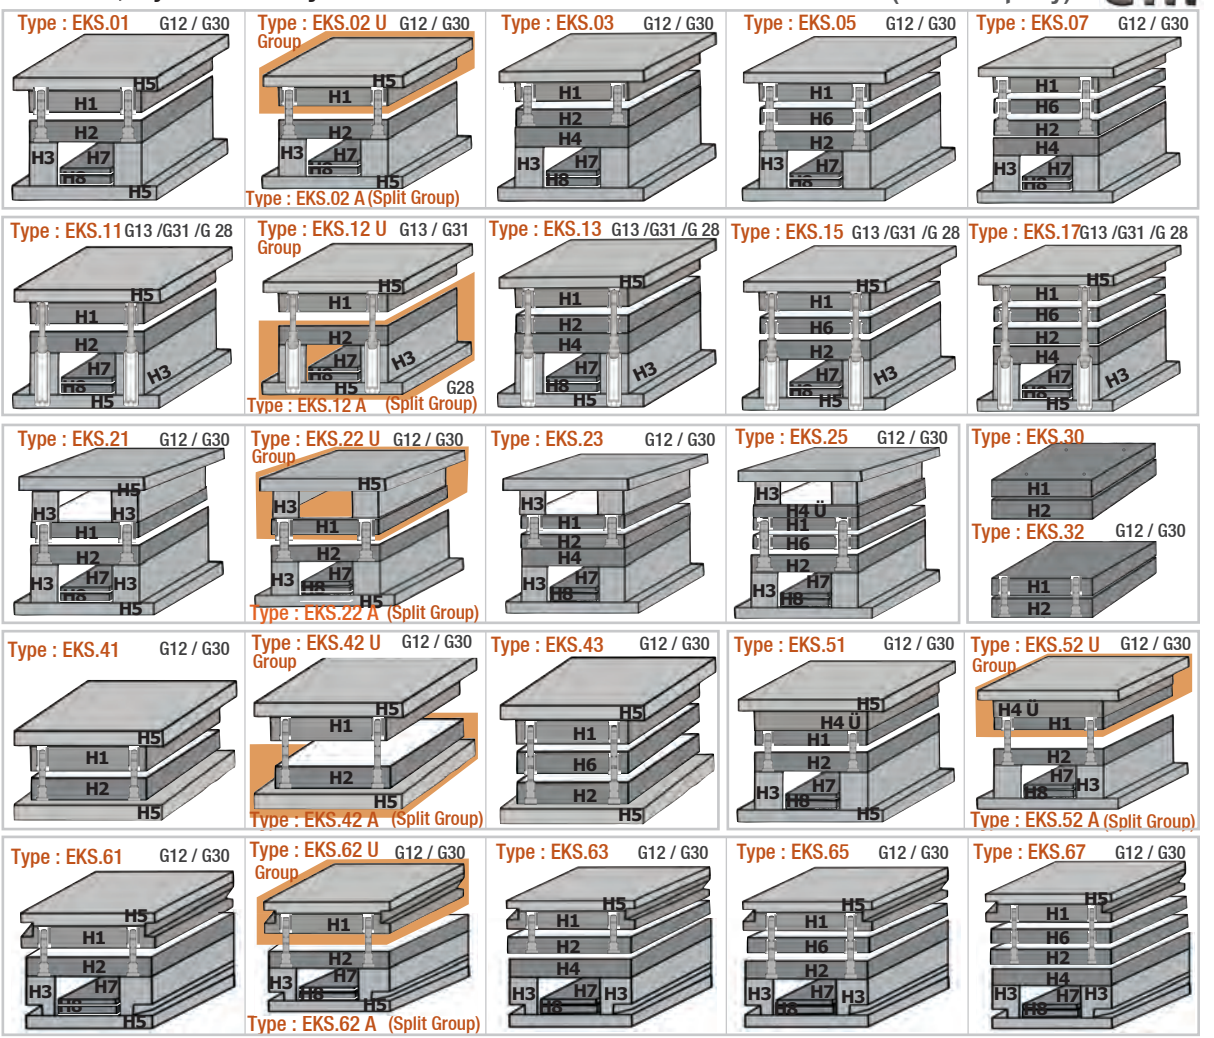
GRINDED PLATE SPECIAL
PROCESSING Injection Ready Sets (From 01up to 67)



DEEP HOLE DRILLING With Our Counter 2000 mm
Angular and Plain, Ejector and Water Runners are processed.

Standard, Injection Ready Mould Sets and Diversification

Production (Our Company) : GTH



Production As Per Request/GTH
Dimensions: Up to 1800 mm

You can always trust our experience, expertise and GTH quality.

CNC Processing (3D) can be done as per request in plate works of your standard or figured moulds.
Some diversification at our production are specified above and their cycles can be done by you.

- **EKS.01 ~ EKS.07** Plastic Injection Standard Ready Sets (Guide Pillar Bush Equipped with Bolt Connection) Mould Base
- **EKS.11 ~ EKS.17** Plastic Injection (With Collar Overall Guide Pillar System Bolt Connecting) Mould Base
- **EKS.21 ~ EKS.25** Plastic Injection (Hot Runner / Manifold Created Plate Connecting) Mould Base
- **EKS.30 ~ EKS.32** Injection Moulds (Holder Plate Group H1 - H2) can be done connecting channelled as per request.
- **EKS.41 ~ EKS.43** Plastic Injection (Located excluding Plain Holder Set - Ejector Plates and Wedges)
- **EKS.51 ~ EKS.52** Plastic Injection (Female Holder - Support Plate / H.4 Added, Standard Sets)
- **EKS.61 ~ EKS.67 METAL Injection** (Connecting System, Connecting Cover and Female Holder have been created).

Diversification: Your Mould Base can be produced as per desired (EKS - EDS - ESI) position, for other mould types, cycles can be done by you according to the table. Example: ESI.01 for mould numbered 01 from ESI.serial.

Material: CK 45 Steel
Production As Per Request

Injection (Plastic / Metal) Ready Mould Sets:

Quality - Economic - Mould Sets
Standard- Precision Guide Pillar Bushes
are produced in our company with fast delivery.

Standard & Special Production Ready Mould Sets

Mould locking and counter place opening process, hot/ cold runner place and manifold plate processes, drilling of cooling water runners (Diameter 8-30 mm), die chaser, flange slots works, angular or plain pool and core places are prepared with customer drawing at special characterized moulds.
The creation of ejector pin and back striker holes are presented as CNC Production suitable to ejector mould 3D data and that all plates are connected or with guide pillar bush as per request at plain plates, also as split pieces, standard mounted or ground plate with fastest delivery periods. You can always trust our experience and expertise quality.

Mercury Steel Material

DIN 17006

Mercury Steel: Cylindrical recess material very suitable for production sector/ mounting industry, especially mould production.
Ensures compliance to usage with its suitable hardness - surface brightness - stainless - flexibility, it is an essential product for equipment and tool production, mercury steel material (BOHLER) can be supplied with a wide variety and high quality selection from our company stocks. The desired hardness can be obtained with simple heat processing method as per request.

Mercury Steel, is a tool steel hardening with water.

Forging Anneal : 1050 - 800° C
Soft Anneal : 700 - 720 ° C
Anneal Hardness : Maximum 280 HB
Stress Relief Annealing : 600° C
Pre-heat for hardening : 650 ° C
Hardening(Quenching) : Up to 12 mm, at 780-800° C Oil
Up to 12-20 mm, at 780-800° C Water
Up to 20-40 mm, at 780-820° C Water
Up to 40- 60 mm, at 810 - 830° Water
Temper : 180- 200° - 1 Hour / 25 mm.

CC . Dia.
Piece: (Length)

Chemical Analysis:
% C1,15-CR 0.70-V 0.10

Material : 115 CR V 3
According to DIN 17006

Presentation: Mercury holes specified in Table is presented as 2 Meter / Length. From 2. 0 mm up to 8,5 mm (1 length is 2 meter.)
As per request: 1 Meter can be taken from 9.0 mm - to 25 mm.

Injection Moulds

Press Mould

Mould ID Card

Red Colour Mould ID card is for plastic injection moulds

Black Colour Mould ID card is for metal injection moulds.

Red Colour Narrow Mould ID card is for general press injection moulds.

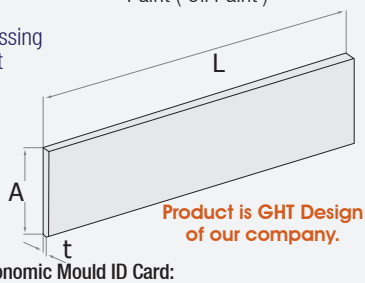
Dispatch: ID Card, 4/2 Pieces Mounting Rivet, Mounting Instruction

ID Card Marking and Writing Pens

Acetate / Felt Marker (Edding 142 M)

Paint (Oil Paint)

Mould Set Pressing Unit



Product is GHT Design of our company.

Simple Mounting - Quite Economic Mould ID Card:
Your ID Card will add style to your mould prepared as a result of long run labour. Also, ID Card will gain high value with your company information and will present a concession.
Your mould ID Card; will be referred with your information on it - company definition- establishment date - coding and important short information. Your mould ID Card, will not be exposed to unwanted intervention among multi moulds (Dirty Painting /Dirty Text /Scraping etc.) at production, mould monitoring facility always will be presented to the mould user with important technical messages specified on card, will be provided working of mould safely with monitoring, your problems such as repeatable possible / frequent mould repair will be decreased, the safety will be ensured with warnings, will be shown different at multi mould shelf system - it is a useful product to be appreciated at long term productions.

Order	A	L	t	Aluminium Sheet
G.125	44	90 mm	0,5 mm	Injection Mould ID Card
G.126	22			Press Mould ID Card

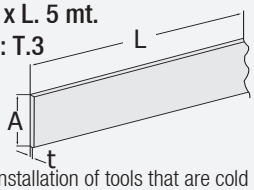
Standard ID Card; They are presented from quite economic stocks.
Special ID Card; Pls. request price unit price" **for ID card with company logo as per request** or data sheet involving different definition.
Other Special ID Card; Pls. request price unit price" for your designs with different dimension and material.
Mounting Instruction; ID Card is presented with mounting rivet in its packing. The slots are opened by retaining to suitable place from hole places on ID Card (Diameter 2,5 x 10 mm Depth) with electrical drill. The rivets with its card is swelled with hammering in its slot, your simple easy mounting has finished, you can be proud of your work created with small detail.

Adjusting Shim, Gauge - Band

Thickness Adjustment Detection - Precision Liner

Precision Liner Band

A .13 mm x L. 5 mt.
Tolerance: T.3



It is used for installation of tools that are cold rolled, spring hardness, high plain precision shim, steel strip and resistant to corrosion and acids, adjusting of equipment, balancing tolerances, feeding bottom of assemblies, rectifying of counters, establishing of mould, setting of bearing clearance, running in of setting devices, setting of cutting blades, rectifying of work piece all kinds of tolerance measurements.

Precision Liner Band

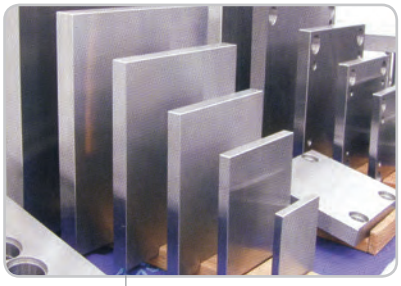
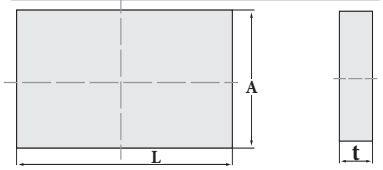
500 x 500 mm Large Plates; The production for lifting lug is done by tapping.





Precision Grinded, Ready Steel Plates

Precision milled, grinded plates are prepared as rectangular, square or as per request in the desired dimensions, also hole, pool, core space and similar processes can be done on plate, the desired precision tolerances excluding standard dimensions (Table) are applied. Side surfaces are milled / precision perpendicularity and roughness are provided, wide surfaces grinded plates with CK 45 Ereğli / Work Tool Steel Material are available at our stocks normatively or can be supplied in 2-3 days. In addition, except for our standard materials, our production from desired materials (Alloy Aluminum or Quality Steel Material) is possible. All of these processes are produced within the structure of our company, then they are presented to our customers by providing cost saving. We are an accomplished and dedicated and customer oriented company with our experience and knowledge, advantages of being ahead and with our presentations of GTH mould equipment improved by us and needed by the whole market and with unquestionable quality.

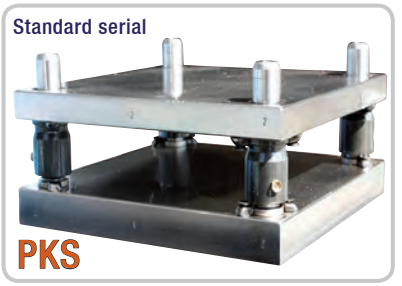
Ground Plate
Type : A x L x t

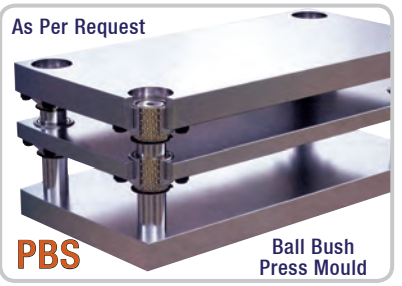
Special: 3D technical drawing
Standard: Technical drawing

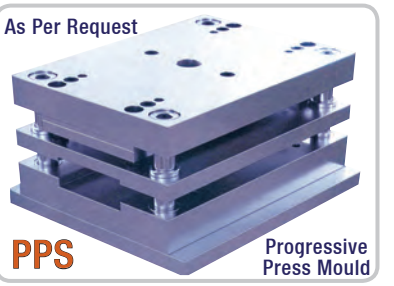
Material : CK 45 Steel
Production As Per Request

Precision Grinded, Ready Steel Plates Order Form:

Your standard order is selected from Table or for your special orders, technical drawing is required.







You can always trust our experience, expertise and GTH Quality.

Güvenal A.Ş.: We have started with our precious masters in 1976 at Süleymaniye/Istanbul. Our mould passion has continued with mould experience /skill for many years. Even in the absence of machine/tool, we continued the development of mould making profession by using levelling technique unselfishly .

O ur company has been accelerated in workshop equipment as well as with a variety of mould system (mechanical springs, ejector / punch) presentations, standard ready press mould sets and guide pillar bush works. We have established our machine sales company in 1997, we added value to the sector related to mould and counter by adding cutting tool sales / manufacturing/ technical support subjects,

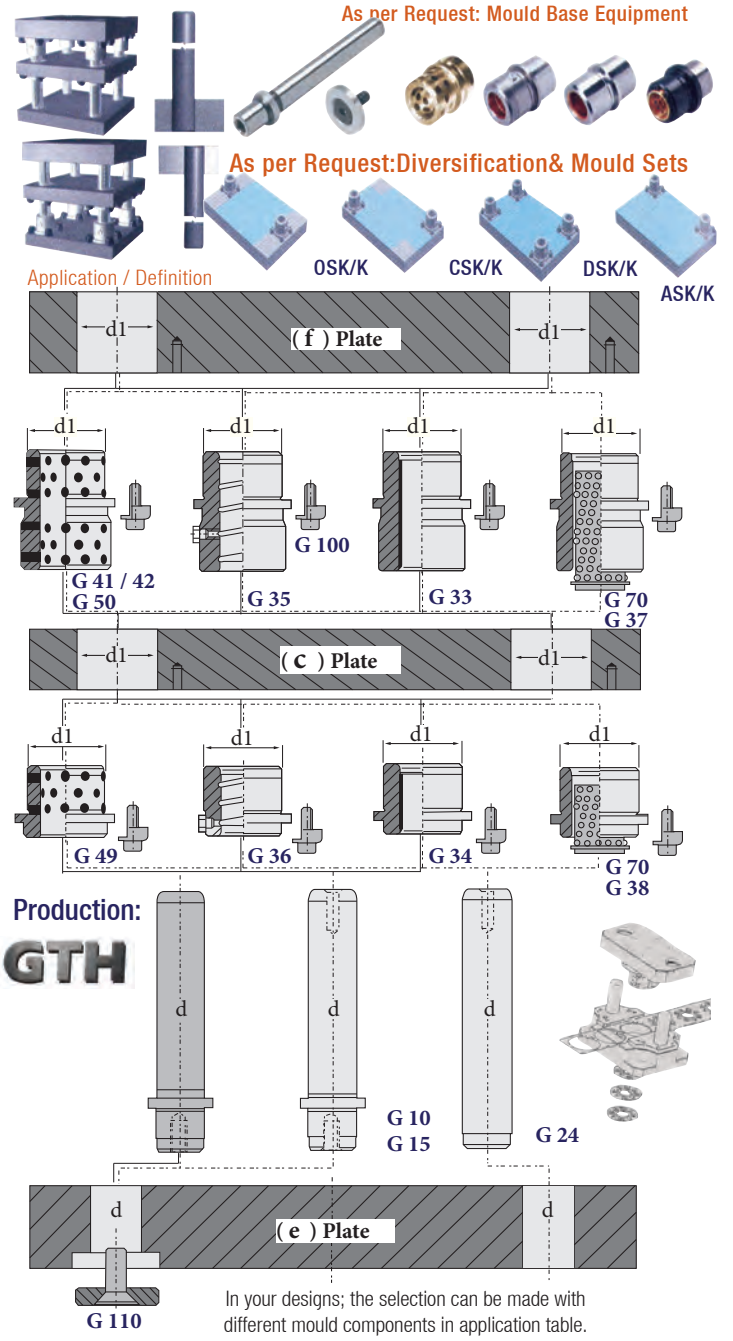
In addition, our mould polishing leadership (it has accelerated works) with our hot runner interest has provided technological attacks to the sector. By opening 3. company store in 2010, we have approximated sales services through it to our customers. Today, our 145 employees are honored to contribute to the industry with technical office works including industrial cities,

GTH mould equipmen and our ready set manufacturing companies. **GÜVENAL** that has given itself over to its job will continue **"Suitable Mold Prices"** Policy with 2. generation team having the same vision value as solution partner to our industry with your supports.

Standard&Special Ready Press Mould Sets;

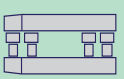
In Our Production; precision surface grinding of Mould Base plate as well as circumferential perpendicularity precision are made by using machining power and our CNC machinery as well as new requirements of design engineering. The connections are completed with 12.9 Cylinder Head Cap Screw by providing reference points, using **GTH** guide pillar Bush components that are produced by us sensitively at all sets. In addition, 1 or 2 eyebolt holes (according to the load) are opened for mould lifting and mounting (Mould lock can be inserted as per request). Ereğli / CK 45 (Work tool steel) are used at our production, also as per request, Aluminum Alloy or quality steel material can be used. Thickness and circumferential tolerance values applied as standard are ± 0.1-0.2. The sets and plates up to 1600 x 800 mm are produced with fast delivery. **Thus, our national capital is protected.** In order to avoid possible errors of measurement in the customer drawings at special character moulds, all operations are reviewed by GTH, information flow of assortment is provided within mutual information, the most important one is to follow customer delivery times by our company meticulously. Note : We deliver standard sets in 2-3 days or partially from our stocks according to the urgency of your work.

Standard & Special Press Mould Sets

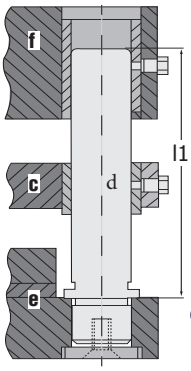


In your designs; the selection can be made with different mould components in application table.

Aluminum alloy as per request - High quality Steel Material Mould Base Production is done.
CNC Precision works as per request - Pool Draining- Die Spaces - Core Slots with short delivery.



Press Mould Base - Guide Pillar Bush Selection:

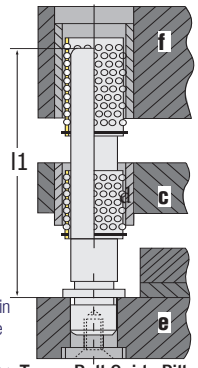


Type : Plain Guide Pillar
(Standard)
Sliding Bearing

Plain Guide Pillar Application

Reverse Guide Pillar Application

Suggestion: Pls. note that shrink fits are not suitable for four columned moulds ! Generally, two or three diversification can be chosen in cases that Guide Pillar space geometry is irregular. To know required space for mould Guide Pillar or preloading is important



Type : Ball Guide Pillar

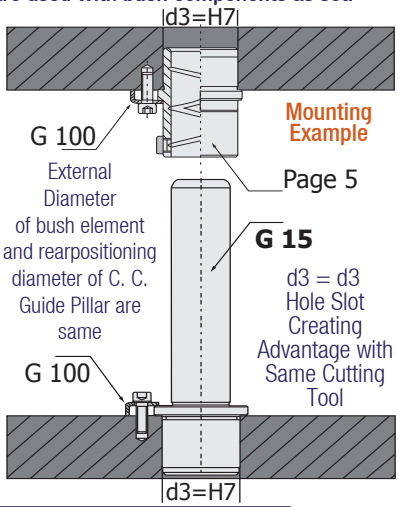
GTH Mould Columns; are polished with Surface Polishing Machine (Surface Finish) at the final stage of production (After grinding)

Thick backed Guide Pillar G15: It is used as centering element at cutting and form press mould sets. In processing of **Guide Pillar / Bush** Slots on mould, processing of Guide Pillar and bush holes also are provided with the same dimensional tools (Drill/Reamer). Thus; the necessity of using different tool will disappear. Advantaged Product **G.41 /G.45 / G.42 /G.49 -G.50 /G.35 - G.36 /G.33-U / G.34-U** (Index Section: Page 5) **are used with bush components as set.**



Order: **G.15.** d x L1 x L2

Material : 1.7131 (16 MnCr 5) Case Hardening
Hardness : 61 - 63 HRC (Heat Treatment)

Operating Elements : G.100 - G.33 /G.34 G.35 /G.36 -G.40 /G.42 - G.49 /G.50

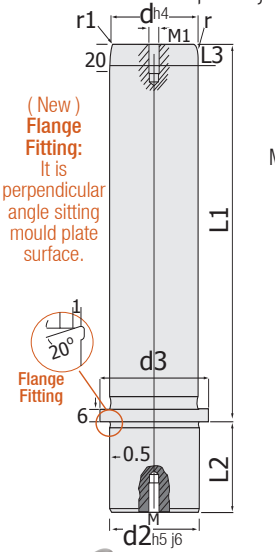
All dimensions are promptly delivered from our stocks.
It is suitable to use with demountable pillars, ball cage and all other bushes. Mould Producers; should be paid attention to choose products suitable to the tolerances/standards in Guide Pillar-bush selection, to prevent reverse closing of mould, three pieces main dimension and one piece auxiliary dimension (15-19-24-32-38-48-60) can be used, these products are limited in our stock and can be produced as per request.

GTH Mould Pillars; are polished with Surface Polishing Machine (Surface Finish) at final stage of production (After grinding)

G.10
STANDARD C.C.C Guide Pillar with Centre COLLAR

At all cutting and form moulds, it has suitable standards to all bush operating components.



G.110 Guide Pillar Mounting Flange

It can be inserted directly to the slot opened on the mould plate. During mounting, absolutely no shrink punch should be done. It can be positioned via shrink fit to the slots and fishplates or mounting flange with suitable tolerances or also with chemicals.

Info: For mounting dimension and tolerances, refer to Page 46.

Don' t use two products without oil groove together. One of the products should be with oil groove.

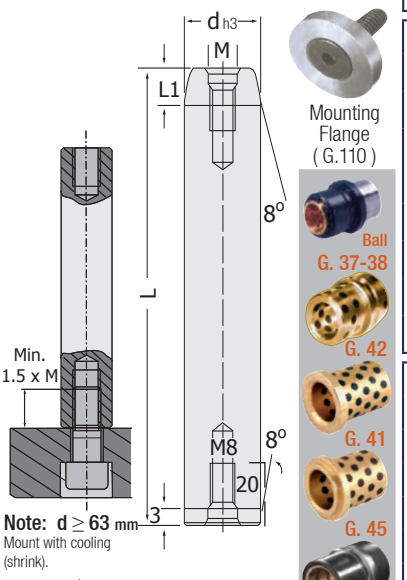
Order : G.10. d x L1 x L2

Material: Ø 30 ≤ 1.7131 (16 MnCr5)
Hardness : 60 - 64 HRC
Ø 40 ≥ C 45 With Induction

Operating Elements : All sliding systems also can be used with ball bush tools.

GUIDE PILLAR G.24

Mould Guide Pillar, Internal Screwed



Note: d ≥ 63 mm
Mount with cooling (shrink).

Not: Section (d), two different products are to avoid reverse closing of mould during mounting, three pieces main dimension and one piece
d= Ø 15 -19 -24 -32- 38-48 -60 mm
d = 48 /50 - 60 /63 - 80 are produced as per request.

GTH Mould Pillars; are polished with Surface Polishing Machine (Surface Finish) at final stage of production (After grinding)

If Extreme Lateral Forces are occurred at press moulds, in these cases, frictional Self lubricating plates should be used with pillars.

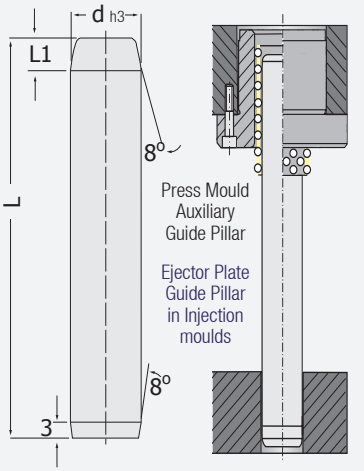
Order : G.24. d x L

Material : Ø 30 ≥ 1.7131 (16 MnCr5)
Hardness : 60 - 64 HRC Ø 40 ≥ C 45 With induction

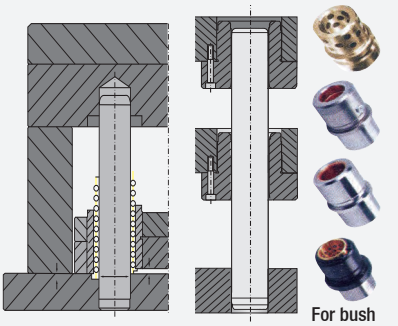
Operating Elements : It can be used with all sliding systems as well as ball bush tools.

GUIDE PILLAR G.19

Inner Press Type, Mould Guide Pillar



It is used as auxiliary centering guide component at press / sheet moulds or progressive mould plates. It can be used with all sliding system or ball bush sets. When precision and iterative high speeds are required at injection mould ejector plates, it is suitable to use together with ball set and also with sliding and self-lubricating bush mould components.



For bush selection Refer Page 5

Plain Guide Pillar G.19

Order : G.19 d x L

Material : Ø 30 ≥ 1.7131 (16 MnCr5)
Hardness : 62 ± 2 HRC

Operating Elements : It can be used with all sliding systems as well as ball bush tools.

Order : G.09 d x L

Material : 1.7131 (16 MnCr5)
Hardness : 58 - 60 HRC Depth : 1.5 + 1 mm

Operating Elements :
Self Lubricating Bushes are recommended

The importance of alignment sensitivity of punch and matrix at moulds is very obvious. This alignment depends on accuracy and protection of sensitivity, correct placement of Guide Pillar/ bush groups, quality and abrasion resistance. It is especially demountable. We make an effort to expand this product range with newly created supplements such as guiding components.

GTH Mould Pillars; are polished with Surface Polishing Machine (Surface Finish) at final stage of production (After grinding)

GTH Mould Components, are designed and produced by persons who achieved perfection.

Special production can be done as per request.

Production GTH

GUIDE PILLAR G.09

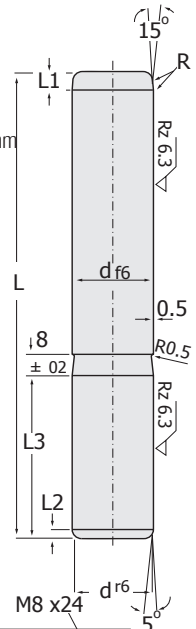
Mould Guide Pillar, Slotted Type

Heavy Type Press Moulds

Application:
Grinded surface is Holeless up to Ø d = 80 and Ø 80 = M.12 x 24 mm has one lifting hole.
From Ø d = 100, it has hollow (d2) and 2 pieces M.8 x 24 mm lifting holes.

Note :
Hole tolerance should be H7. It is recommended to use mould Guide Pillar only with self lubricating beddings

Compatible Bushes:
Self-lubricating Bronze Bushes DIN 9833 Guide Columns



Standard serial
d=25-32-40-50-63

RECTANGULAR, CAST BLOCK GUIDE PILLAR

Large Size Slotted G. 20

Cast Block Guide Pillar
G.20 Plain Guide Pillar Type Bedding is used with G.80 Cast Block With Collar Bushes. At Sheet Cutting Progressive Form Pres Moulds, it is reduced disassembly assembly period of Guide Pillar & bush. No opening of Guide Pillar bush holes on mould holder is required, it reduces labour cost and also saves time by shortening production period of mould, they are mould components forming bush / Guide Pillar set telescoping to upper/lower case.

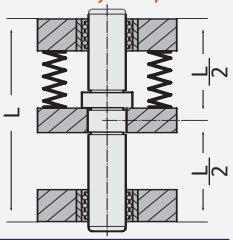
Mounting Example:



Order : G.08. d x L x L1

Material : 1.7131 (16 MnCr5)
Hardness : 62 ±2 HRC Depth : 1

Operating Elements :
Ball Cage / Steel Bush / Sleeve

Scraper - Connection

Ball Bush System G.08

Hole tolerance for shrink fit place of mould Guide Pillar affects is N5. Securing lateral load resistance of mould beddings. In moulds with guide plates or having Guide Pillar mounted to mould from bottom or top, if the distance (L) applying power is equal, bending values of rotary and guide columns are equal.
By securing mould Guide Pillar to the guide plate, there will be important improvements at bending values of columns. Until the distance (L/2) between application point of power and fastening surface reduces to half, load lifting capacity is increased **8 times.**

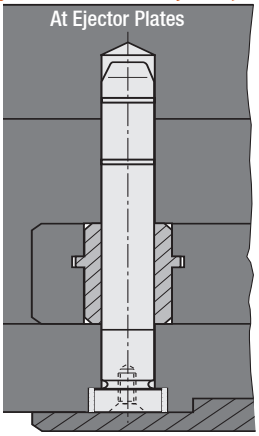
Injection Mould Mounting Example



Order : G.11. d x L

Material : 1.7131 (16 MnCr 5)
Hardness : 58 - 62 HRC

Operating Elements :
With all lubricated type bushes at press or injection moulds.

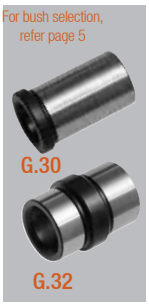
GTH Mould Pillars; are polished with Surface Polishing Machine (Surface Finish) at final stage of production (After grinding).

GUIDE PILLAR Type

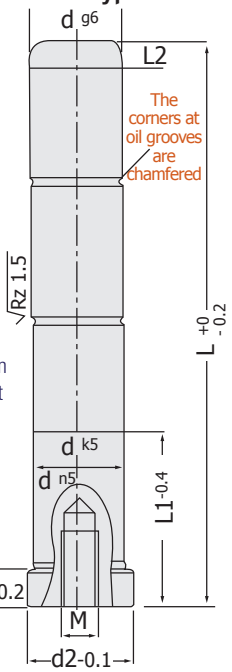
G.11

Oil Grooved (Chamfered) - Threaded Type

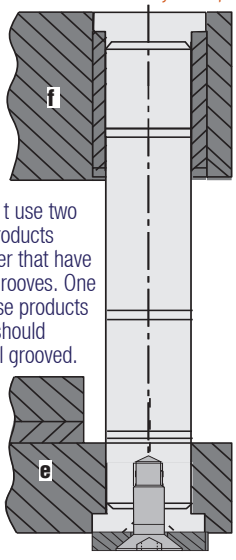
For bush selection, refer page 5



New product
As per request, it can be fixed by thread at cap direction. By disassembling mould without dismantling, it provides process iteration advantage

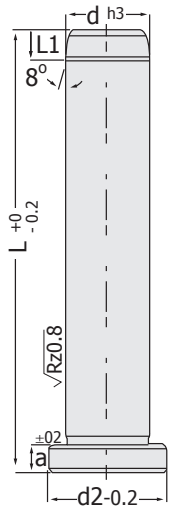


Press Mould Mounting Example



Don' t use two products together that have no oil grooves. One of these products should be oil grooved.

CAPPED PILLAR
Ball Type G. 18



Suitable Bushes at Page 5

It is used at ejector plates of injection moulds and ball bush ejector plates working precision and serially. In addition, it is compatible to work with intermediate plate of progressive press/sheet mould as auxiliary centering component.

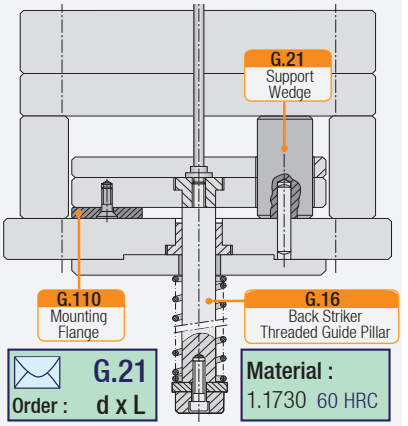
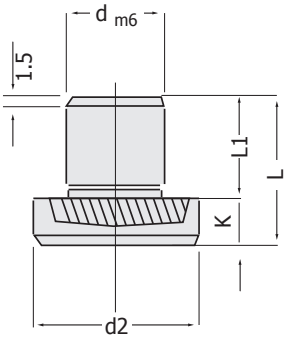
At injection moulds; Thrust wedge that can be used in order to avoid dent between support plate (H4) and bottom joint plate (H5A)also can be provided working of ejector plates more rigidly and sensitively, in order to avoid clicking (Gap), G.110 Mounting Flange can be used.



Order : G.21 d x L

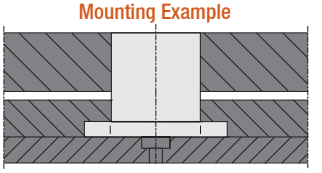
Material : 1.1730 60 HRC

THRUST PLATE G.120
Mould Plate, Thrust Stop Pin



Stop Pin / Thrust: It is compatible to use between holder plates of injection or press moulds or as mould inner equipment

Mounting Example



Mould Plate, Thrust Stop Pin

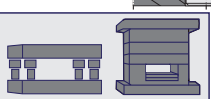
d	8	14
L	17	21
L1	12	15
d2	16	24
K	5	6

Order : G.120. d x L

Material : UNI 16 Cr Ni 4
Hardened and Grinded

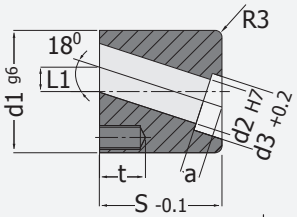
Operating Elements :
It is used as thrust or equipment at injection or press moulds and between holder plates.

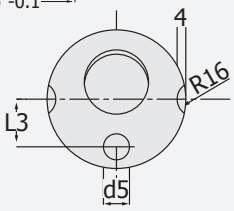


Production GTH

CORE ANGULAR BUSH G. 61

Inclined, Core Pin Holder





Cam Pin Bearing

This unit eliminates angular perforation requirement, to insert this unit, only a hole is perforated at the front of the mould.

Operating Elements :
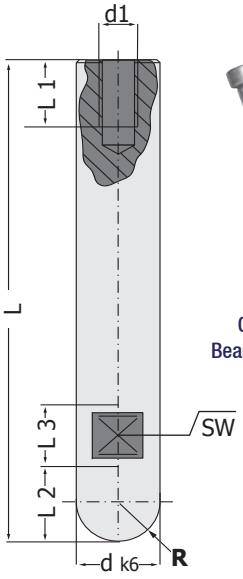
It is used with G.61 Core Pin Bearing as a set.

Injection CORE GUIDE PILLAR G. 14

Inclined - Threaded, Veldon Guide Pillar

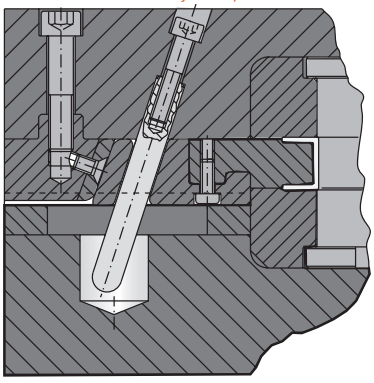


Cam Pin Bearing / Bush

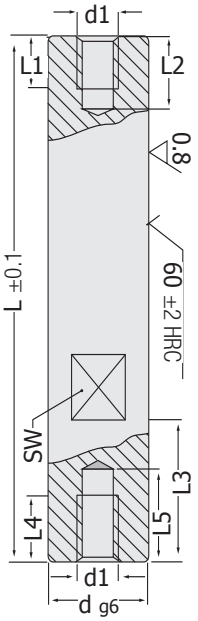
GTH Mould Guide Pillars; are polished with Surface Polishing Machine (Surface Finish) at final stage of production (After grinding).

It is compatible to use at injection moulds, angular Guide Pillar positioning, core systems as cam pin.

Mounting Example



VELDON EJECTOR - THREADED GUIDE PILLAR
Injection - Back Striker G.16



GTH Mould Pillars; are polished with Surface Polishing Machine (Surface Finish) at final stage of production (After grinding).

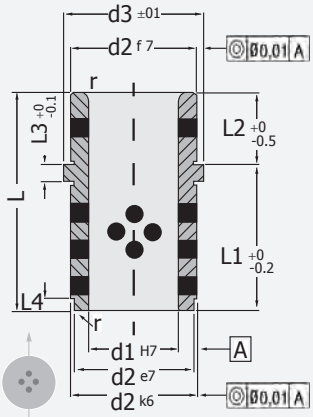
Self-lubricating used at ejector system with unlubricated Guide Pillar G. 17 at ejector plate pillaring system of injection moulds.

SELF-LUBRICATING - CCB. BUSH G.26

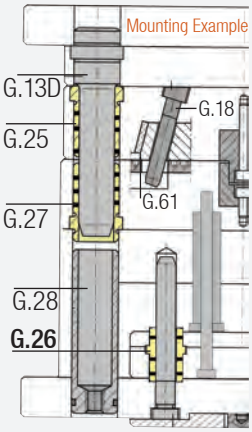
Bronze Bush with Centre Collar

Injection Moulds at Ejector Plates Pillaring System

Self Lubricating



Working Direction



Lithium Grease:
Self-lubricating Bush/Plate Lubricating Grease
Order No: 950200
To avoid abrasion of Self-lubricating mould component products at first use and to activate permanent lubricants, friction surfaces should be covered with lubricating film (One time).

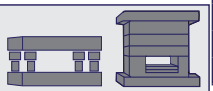
Order : **G.26. d x L**

Material : Bronze Material Self-lubricating Providing Lubrication

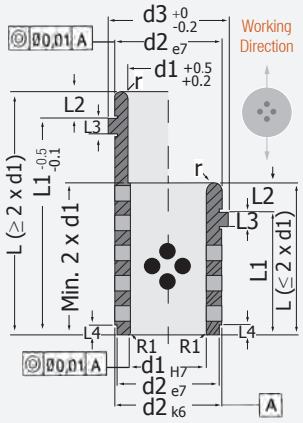
Usage: G.17 Guide Pillar without Oil Groove
G.15 Thick backed Guide Pillar (Press Moulds)



Self-lubricating Centering Bushes Using at Mould Pillaring System With Collar Shouldered Guide Pillar G.13D without Oil Groove.

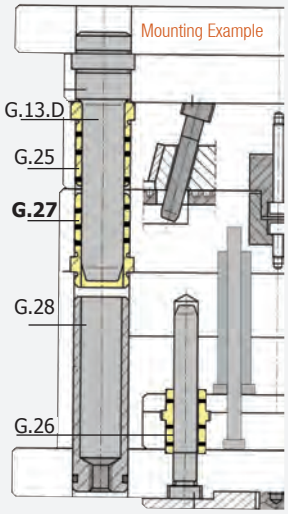
Self-lubricating Bushes Using with Guide Pillar with oil groove at mould pillaring.

SELF-LUBRICATING - TCB. BUSH
Bronze Bush With Collar G.27



Graphite, Self-lubricating

It is used with G.13.D columns at injection moulds. By centering mould in length, more higher stability is provided. In this way, precision and long period working environment provides with other equipment (ejector - core etc., H7 tolerance is recommended at mutual working systems.



Order : G.27. d x L

Material : Bronze Graphite Self lubricating

Operating Elements : G.13.D illar Guide Pillar without Oil Groove

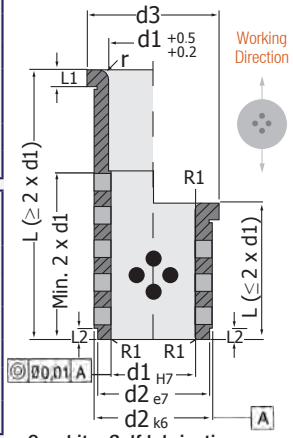
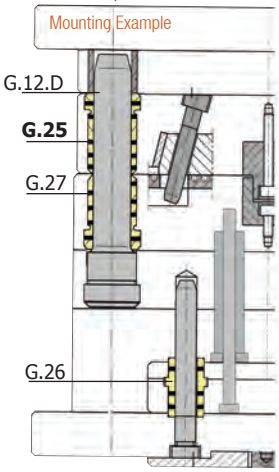
SELF-LUBRICATING - CB. BUSH
Bronze Bush G.25



Graphite, Self lubricating

It can be used with G.12.D G.17 at injection moulds. The products should be lubricated one slightly. **Temperature Resistance: 150°.** It can be worked even at humid environments. It is compatible with sudden motions (scraping and ejector) and is a product not affected from vibration and impacts.

Continuous, Stocked Products



Order : G.25. d x L

Material : Bronze Graphite Self-lubricating

Operating Elements : G.12.D Shouldered Guide Pillar without Oil Groove

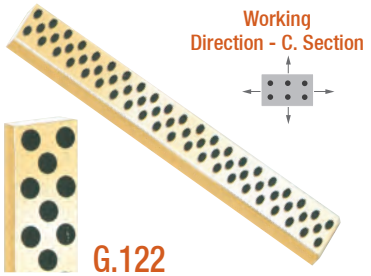
INFORMATION: Sliding bearings provide higher stability. Lubricating of these products as film is reduced negative impacts. Steel bearings produced in the past were required excessive lubrication and had breaking tendency at high strong or speeds.

SPECIFICATIONS: Perforated Structure, Oil Intake Feature - High Hardness Carbon - Nitrided Surface, Extraordinary Abrasion Resistance.

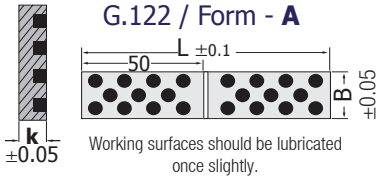


G.122

GRAPHITE-BRONZE(SELF-LUB.) PLATE

Plain Type DIMENSIONAL, Special Cutting

G.122 / Form - A



Working surfaces should be lubricated once slightly.

G.122 / Form - B

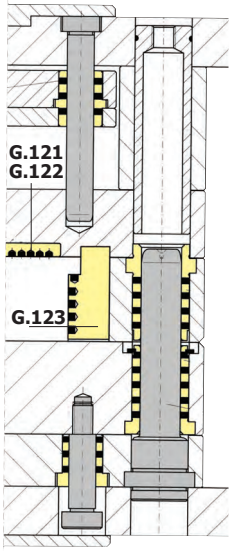
Order : ('T' Bed Self-lubricating) G.121. C x L

Material : Bronze, Graphite Self lubricating Friction Plate

Operating Elements : Injection Moulds, Core Systems, Sliding Bearings etc.

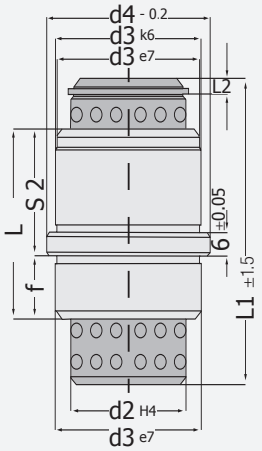
Self Lubricating Equipment provide above expected load carrying capacity at lower sliding speeds and wide temperature range, lubricant Self-lubricating orifices is positioned with suitable geometric structure. Thanks to it, maximum sliding motion provides along sliding motion. Especially, they perform well with hardened and grinded bearings. Sliding surfaces should be lubricated slightly before working.



BALL BUSH BEARINGS G.29

Ejector Plate Ball Bush Standard Set

Steel Short Bush / Ball Bronze Cage



It provides more precision and rapid motion of ball cage holder steel bush set and ejector plates at injection moulds.
Table that has been created set as standard.

G.18. Ball CC - G.19. with Plain Guide Guide Pillar

New Steel Bearing Bushes G.74 / G.75

There are balls at inclined - serial- parallel intermediate channels inside of guide and centre collar steel bushes. (Balls move by rotating in slot and frictionless.) In this way, axial motion remains limitlessly free. Also, bearing logic is provided to the steel bush. The advantage of our new product G. 75 according to other similar product G. 29.

Extra Stroke distances at unlimited axial direction and robust powerful centering is provided - Free motion unlimited with low tolerance absorbs other pinking and tauting. It is presented unlimited motion advantages with compatibility to high speeds.

The products marked with x are stocked.

Centre Collar Ejector Plate Bush G.75; Rigidity in centering with free axial motion at long ejector systems of injection moulds - Unlimited Frictional Motion. Guide Bush G.74 - Quality Control Equipments - Practical and Reliable product for machine and mould production and device design. For maintenance and cleaning: WINKEL SIGNUM SPRAY OIL is used.

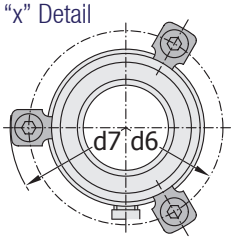
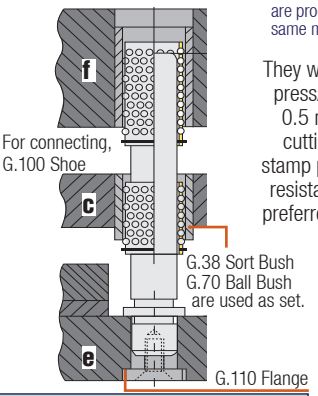
"x" Detail



For spare sleeves, Page 46. For clamping shoe M.6 x 20 d1 = 38 mm and large sizes, 4 Pcs. Clamping Shoe.

Note: Two different products in Section (d) are to avoid reverse closing of mould during mounting, by using three pics. main dimensions and one pc. d= Ø 15 -19 -24 -32- 38-48 -60 mm dimensions at same mould, is avoided reverse closing of mould plate, thus symmetrical mould cluosure is ensured, side products are limited in stocks. They are produced as per request. Example : In the same mould (Ø 20 x 3 - Ø 19 x 1) = 4 Pieces



They work without problem at ball bush, press/ cutting moulds, cuttings under 0.5 mm sheet thickness and where cutting space is low and when 200 stamp per minute are exceeded. It is not resistant to the lateral loads . They are preferred in cases that sensitivity should be increased.

Order: G. 38 d x L x L1

"x" Detail

High Precision Ball Bush: Despite providing high reliability at high speeds, contacting balls from one point, brings the system to precision status against impacts and side loads. Giving Guide Pillar diameter at upper tolerance up to the certain point, compensates this disadvantage. Working surface should be precise.

Press mould sets can be produced at special and general purpose machines, equipment and fixtures without distinction at brass ball cages, length and ball gear as per customer's requests. Mould sets and presses can be applied under normal conditions at 100ºC.

Mounting Example

Ø 19 - 24 - 32 - 38 - 48 - 60 are produced as per request. In order to avoid reverse closing of mould, it can be used with 1 Pcs. Main Dimension.

Bronze plated bushes: It has helical lubrication and inner lubrication system, its position can be lubricated with grease nipple from outside. Finally, equal distance to all lubrication points is ensured. Due to oil intake feature of bronze plated to inside it, there is no need for frequent lubrication, recommended operating speed is15-30 Mt/min. If some conditions such as lubrication clearance, stroke length, radial load and heat distribution are provided, to reach speed as 600 - 800 stroke per minute is possible.

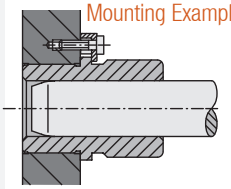
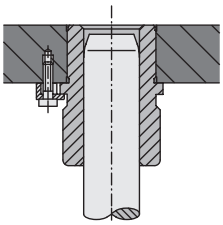
Mounting Example





Bronze Plated Bushes: Hardened steel bushing absorbs strong side thrust. Thus, vibrationless rigid operation is ensured and bronze bush is protected against strong thrust made from end head, inner layer plated bronze with centrifugal technique is resistant against abrasion factor with its high quality. In addition with its excellent heat dissipation feature is ensured rapid distribution of excessive friction temperature.

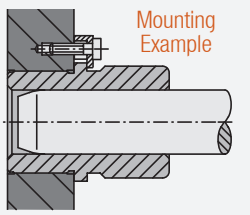
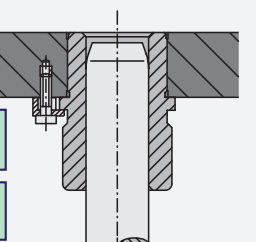
Thick Type Steel Bushes: Don't use two products without oil groove together. One of product at guide pillar or bushes should be used as set with oil groove.
While using guide pillar and bush sets, should be considered that both of them have same brand. Because, grinding tolerance can be different at different guide pillar bushes. Also, this can be caused great problems during both mounting and operating. The dimensions not giving their tolerance are subjected to general tolerance. DIN 7168

Mounting Example





Order: **G. 33.K** d1 x L x L1

Material : 1.7131 (16 MnCr 5)
Hardness : HRC 58 - 62 Depth : 1.2 mm

Operating Elements : G.01
Guide Pillar: G.15 - G.10 - G.19 - G.24 G.17 - G.18 (At F plate)

Pls. lubricate from grease nipple on bush occasionally.

For being **GTH** Products having long life and maximum resistance against abrasion, unique sensitivity has provided at surface roughness. This is also created specific bearing system.

Thin Type Steel Bushes: To provide perpendicularity at bush and guide pillar with new design of GTH Mould Element on product - suitable flange fixation ((Balanced Layout)) on bearing area is created. During mounting, shrink punch should not be done. To avoid clamping and surface disorders at products, by inserting soft tight products to the slots, mounting can be ensured with shoes.

Self-lubricating Bronze Plated Bushes:
Hardened steel bushing absorbs strong side thrust and is protected bronze bush against strong thrust made from end head, inner layer plated bronze by centrifugal technique ensures its excellent heat dissipation with its high quality. **By plating Self-lubricating** inside of bronze plated bushes with special method, has brought longer effective innovation to the inner lubrication system. Finally, equal distance to all lubrication points is ensured.
Due to high oil intake feature of selflubricating plated inside of it (Lubricating during mounting once), lubrication requirement is minimized.

Self-lubricating Bronze Plated Bushes:
Self-lubricating channels has self lubrication feature. These channels create 25 % surfaces of total bearings. After lubrication during mounting, does not require any lubrication process. In cases that should be protected from effects such as impact, failure and heat effect, this system has most appropriate usage area.

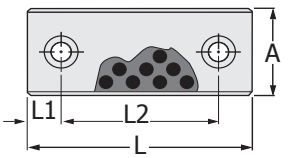
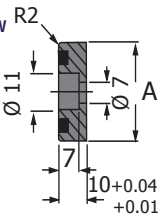
Bronze/Graphite (Self-Lubricating) GUIDE PLATES

G. 85

Thickness: 10 mm / 2 Connection Holes

Connection Bolt: 12.9 Cylinder Head Cap Screw





Self Lubricated Equipment provide load carrying capacity greater than expected at lower sliding speeds and wide temperature range. Lubricant Graphite orifices on it are placed with suitable geometric structure. Thus, they provide maximum lubricant effect along sliding motion, they work especially with hardened and grinded bearings. The sliding surfaces should be lubricated with lithium grease oil slightly during mounting before operating bearing. 25 % / 30 % of surfaces at guide pillar bearings at plain Graphite bearings, are created with Graphite lubricant pores. The parts corresponding to self lubricated bearing component should be grinded and secured parallel to sliding axis.

(For usage value, Refer Page 59.)

Mounting: Cylinder Head Cap Screw M10 x 20

Self Lubricating Plate Usage Advantages:

- High compatibility to sudden motion
- Maximum bearing capacity at low speeds.
- It can be used under water or with chemical solutions.
- Quite wide temperature resistance
- In existence of vibration, it has impact resistance feature.

Material : Bronze - Graphite

Suitable loading value is determined with pressures and PV Value. It is also definited abrasion value. PV Value is consisted from multiplication of Surface Pressure (P) and Working Speed (V).

PV = P x V (N / cm^2 x m / Min.)

P = F / A (N / cm^2)

A = Used Bearing Area

USAGE VALUES

Self Lubricating Plate - Surface Pressure, Temperature, Speed and Lubrication

Surface Temp. Max. (N/cm^2)	Temp. (C^o)	Speed (m / Min.)	PV Value N/cm^{2}x m/Min.	Lubr.
5000	80	15	10.000	Mounting
3000	150	60	20.000	Lubrication With Pressure

Reference :
CNOMO

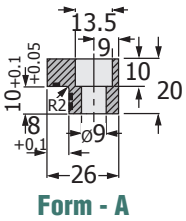
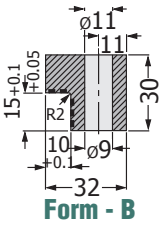
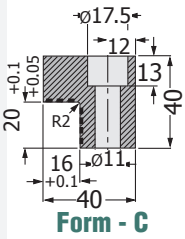
Should be lubricated once during mounting.

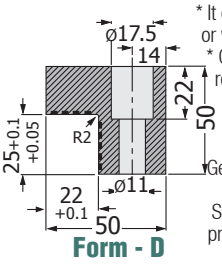
BRONZE, GRAPHITE "L" TYPE PLATES

Angular, Strip - Self Lubricated G. 105









Working Direction

Advantages of Self Lubricated Equipment:

* High Compatibility to Sudden Motion
* Maximum Bearing Capacity at low speeds
* It can be used under water or with chemical solution. .
* Quite Wide temperature resistance hot and cold
* In the existence of vibration, impact resistance.

General Usage Area is up to 150ºC.

Special products can be produced as per request.

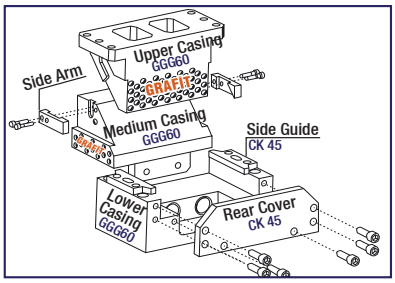
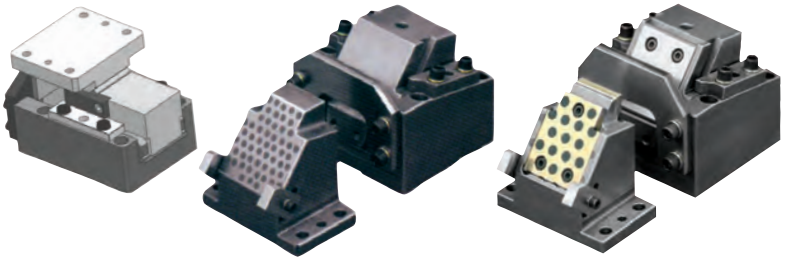
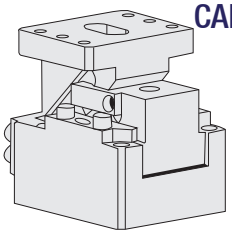
Required Stroke and Force Criteria at Angular Cams: Drive Angle - CAM Angle - Operation Stroke - Required Force (Drilling Force + Spring Force + Friction Force) - Press Force - Driver Force- Cam Force (Required Force / Drive Angle) - Press Stroke (Operation Stroke / Drive Angle)



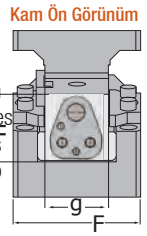


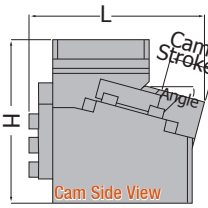
CAM UNITS, DK Serial HORIZONTAL (0⁰) / DIE MOUNTED CAM UNIT

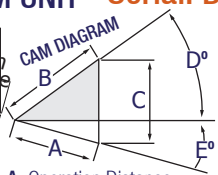
Serial: DK



Cam Units: By turning vertical motion of press to horizontal motion, drilling - cutting - form processes are provided at moulds. These cam units are standard compact design components, plain / angular or aerial cam types are available. As well as standard cam models are suitable to many general applications, also special models are produced as per request.







A: Operation Distance
B: Spring Motion Distance
C: Press Motion Distance
D: Push Back Angle
E: Operation Angle

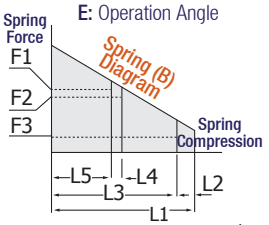
Also, upper casing holes can be finished (with Reamer / H7.K

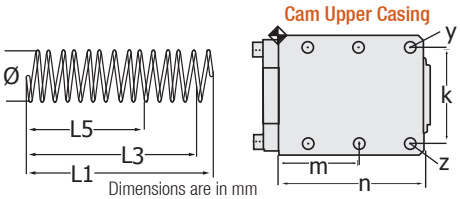
Cam Units: They are compact elements that can be turned press energy / motion from vertical motions to the different motions and can be connected to different angles. - They can be worked at wide force and stroke ranges.

Giving 10% Stroke tolerance is recommended.

Safety and working conditions: Absolutely, should be avoided from lateral loads, cam unit should not be exposed to dirt and burrs (It can be L damaged to friction and surfaces.) To protect repeated operation of cam unit, it should be secured to the mould robustly. Steel or Die Gas spring used at cam units are ensured to bring cam to same starting point at every turn at returns, in case of any adhesion, side guide arms are with safety system to provide bringing cam to starting point. When cam units are mounted with replaceable bronze plates, they should be lubricated with thin oil regularly, in case of replacement of worn plates, should be sure that all and centering elements are in their right position and if necessary, technical setting should be remade and fixed, for service pls. call our company.

Code	Description: (1N =0.102Kg.)
F1	Spring Force during final loading (N)
F2	**Spring Force at CAM operation pressure (N)**
F3	Spring Preloading (Newton)
L	Open Length Status of Spring (mm)
L2	Precompression Amount of Spring (mm)
L3	Length during precompression of spring
L4	**CAM Operation Distance (mm) Cutting - Drilling**
L5	Spring Length During Final Loading (mm)





Dimensions are in mm

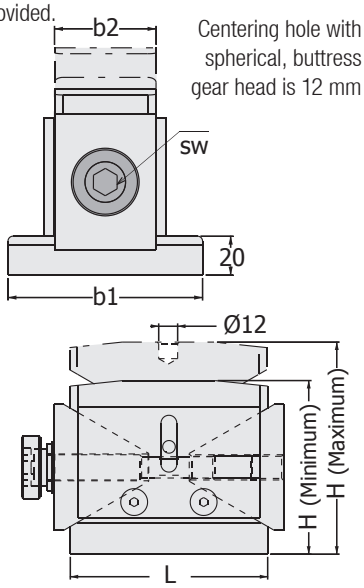
BLOCK SUPPORT Serial: 1520

Straightening Wedges '' HERCULES ''

With HERCULES Unit, lifting and sliding positions of large moulds (precision) are provided.

Centering hole with spherical, buttress gear head is 12 mm



Straightening Wedges: Block surface is machined sensitively and is designed especially supporting or lifting of heavy parts. Quite robust construction is allowed to do precision and smooth height setting as 1/10 mm sensitively, height setting can be done with Knurled Screw or Alien Key, double effects are generated precision vertical motion without great stroke and lateral sliding. It can be used at large machine tools and processing of heavy cast and forging especially after stamping.

Straightening Wedges: Serial: 1520

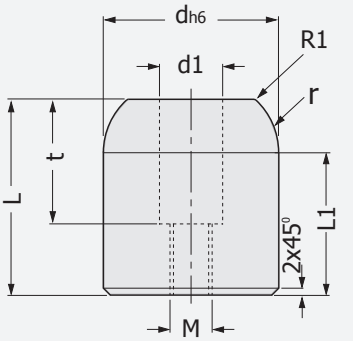
CENTERING PIN G.66

At centering of perforated parts

Countersunk Screw Type



Centering Pins: It is used for centering of perforated parts. Using centering pin provides centering repeatedly with high sensitivity at mould and fixtures. Mounted parts are centered with high sensitivity and quickly. The bolts using during mounting of products should be supplied by users.
Example: M.8 x 70 Cylinder Head Cap Screw

Countersunk Screw Centering Pin

REV. & STRAGHT FIGURE Set	NICKEL / INOX FIGURE- LETTER	REV. & STRAGHT LETTER Set	STRING - LETTER / FIGURE SET WITH HOLDER

Percussive Figures / Letters; High Performance Steel - Precision, Depth Limited. Excellent CNC Engraving, Readable With Regard to Quality for Very Clear Text View, High Qualified, Steel Casings, Fully Hardened Handle and Percussive Places (Signs) are chemical nickel plated and are also enabled to stamp on threated materials. It can be used for marking of strength materials up to 2000 N/mm2 and is packaged as serial in plastic box.
Normal Text Stamping; So, the signs stamped on part can be read directly at marking with hammering.
Reverse&Straight Text; Character stamped on mould is showed straight on the product. (Mirror Image) **Especially, at injection moulds.**

Steel Letter and Figure Set; can be applied to metal surfaces applicable hardness and dimensional tolerance,
" Nickel " Steel Letter and Figure Set; can be applied especially to the stainless/ inox surfaces.

106 Pieces Letter (Word Formation) Figure or Date Stamping SET

Minimum 2 pieces or maximum 3 pieces from existing letter and figures and blank (Unwritten) Characters for word formation are available in set. You can write the desired work or date by marking with hammering and also by coupling to press with press mounting arbour.

106 Pieces Letter /Figure Set (Wood Box)

Order No	Dimension mm	Length mm	Character Qty.
15758	3	19	13 Pcs.
15759	4		10 Pcs.
15760	5		8 Pcs.

PRESS MOUNTING ARBOUR

It is an inserting press machine , Letter and Figure array head for stamping, mounting connection tool

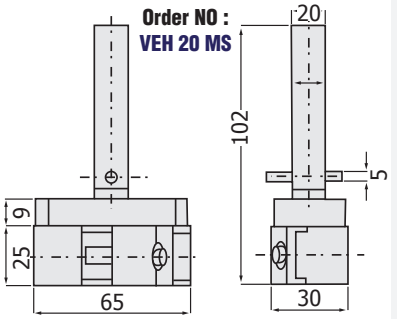
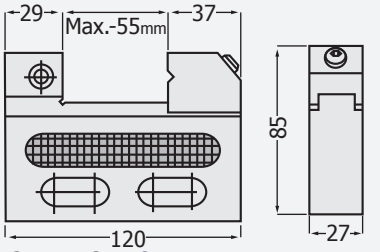
SINKING EROSION CLAMP
EDM Chucks Kit



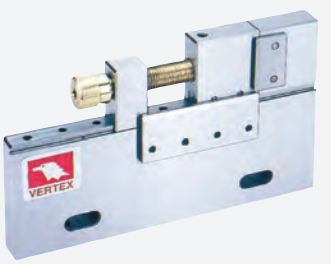
EDM Chucks vise Stainless
Steel - Hardened HRC 58
Parallelism Sensitivity:0.003 mm / 100 mm
Flatness Sensitivity: 0.005 mm / 100 mm

WIRE EROSION CHUCKS
Stainless Steel Holders

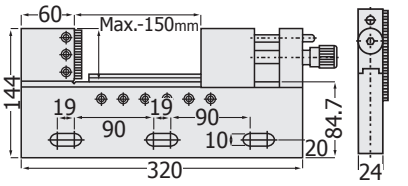


Order NO : VSTV - 50 W

All parts of wire erosion vise are stainless steel and have high abrasion resistance. It is resistant to high water pressure.
Precision Grinded and Hardened: HRC 58 - 60
Parallelism and Perpendicularity: ±0.002 mm/100mm
Max. Opening Capacity: 55 mm
Vise Height: 27 mm
Jaw Depth: 25 mm **Weight :** 1.4 Kg.



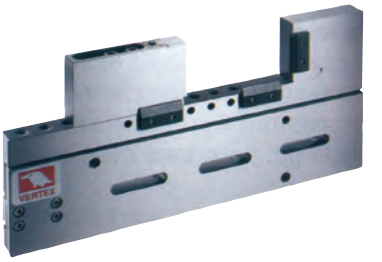
WIRE EROSION CHUCKS
Stainless Steel Holders



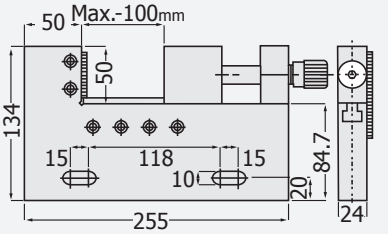
Order NO : VSTV - 150 W

Stainless Steel Clamps

All parts of wire erosion vise are stainless steel and have high abrasion resistance. It is resistant to high water pressure.
Precision Grinded and Hardened: HRC 58 - 60
Parallelism and Perpendicularity: ±0.002 mm/100mm
Max. Opening Capacity: 150 mm
Vise Height: 24 mm
Jaw Depth: 60 mm **Weight :** 8 Kg.



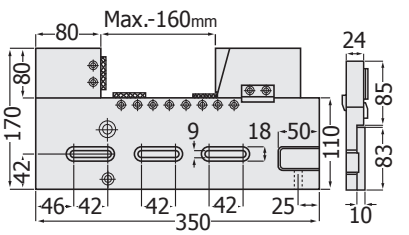
WIRE EROSION CHUCKS
Stainless Steel Holders



Order NO : VSTV - 100 W

All parts of wire erosion vise are stainless steel and have high abrasion resistance. It is resistant to high water pressure.
Precision Grinded and Hardened: HRC 58 - 60
Parallelism and Perpendicularity: ±0.002 mm/100mm
Max. Opening Capacity: 100 mm
Vise Height: 24 mm
Jaw Depth: 50 mm **Weight :** 4.9 Kg.

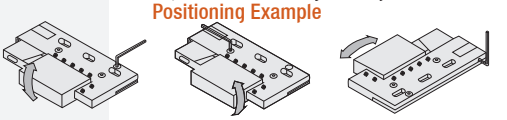
WIRE EROSION CHUCKS
Stainless Steel Holders



Order NO : VSTV - 320 W

All parts of wire erosion vise are stainless steel and have high abrasion resistance. It is resistant to high water pressure.
Precision Grinded and Hardened: HRC 45 - 55
Parallelism and Perpendicularity: ±0.003/5 mm/100mm
Max. Opening Capacity: 160 mm
Vise Height: 24 mm
Jaw Depth: 60 mm **Weight :** 8 Kg.

Positioning Example



PERMANENT MAGNETIC CARRIER

Load Bearing Magnetic Block

It is "3,5" time stronger than similar.

ELM-3000	3000 kg	**6600 kg**	60x3500	181 kg

Magnetic Carrier Blocks; It is compatible to carry magnetic sensitive metal work pieces, steel plates, machine parts and round metals. Lifting power can be changed according to surface cleaning, thickness of material, flatness and magnetic block and intermediate clearance of material. Self magnetic block works without requiring any power supply unit. Carrying ring is movable. It is carried in balance, with easy mounting, lifts, handles and carries load. Our products are ' CE ' Certificated.

Important: Magnetic Block works while load is on it / On Position - While is idle, should be remained Closed / OFF Position.

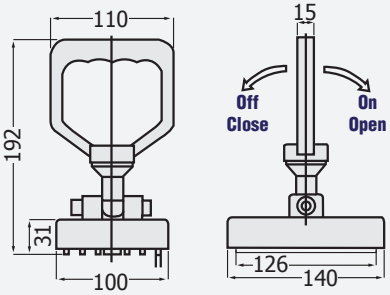
MAGNETIC SHEET PLATE CARRIER

Separates - Holds - Carries Sheet Plates

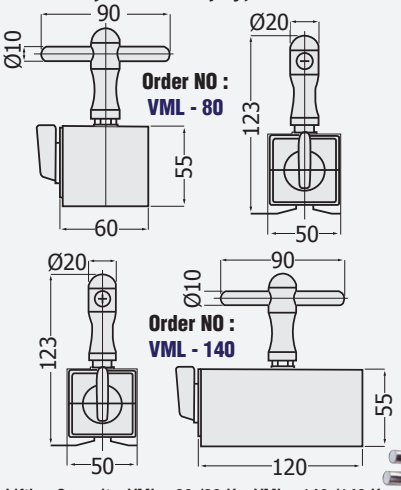


Lifting Capacity : 150 Kg.
Unit Weight : 2,5 Kg.

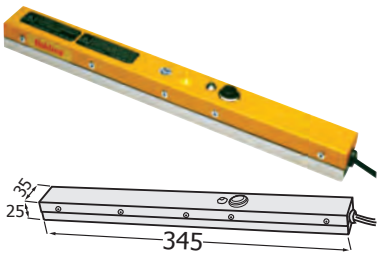
Order NO : VML - 150

MAGNETIC PART CARRIER FOOT

Self Magnetic Strong Type



Lifting Capacity: VML - 80 /80 Kg. VML - 140 /140 Kg.
Unit Weight: VML - 80 /1.2 Kg. VML - 140 /2.2 Kg.
It holds magnetic sensitive work pieces easily and elastically and are useful products doing lifting.

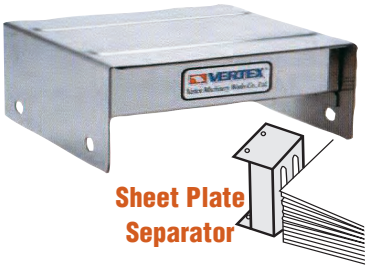


MOULD, MAGNETIC RECEIVER UNIT

Mould Inner Magnetic Absorber

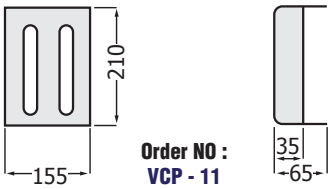
Especially removes the unwanted magnetization generated on press mould plates and guide pillar bushes. Protects mould from burrs and magnetic effects. It is worked excellent at places that are narrow and hard to reach, in addition wide surface. without demounting mould - The product demagnetizes place with **EHDB** magnetic receiver effect. It is prolonged mould and components life. By waiting 4 minutes continuously, it removes magnetic at effect area in 1 minute, Mobile / Travel Unit are used at every areas.

Order No	Current	Voltage	Effect Area	Product Kg.
EHDB-210	1.2 A	220 V	100 mm	1 Kg.



MAGNETIC EJECTOR - SHEET SEPARATOR

It is cleaned and separated sheet plates.



It is useful unit providing the removal of metals (sheet plates) especially layers of thin plates that are not separated at sheet blocks, also, in addition unwanted chips, detrisuses according to basis of pushing each other of magnetic poles.

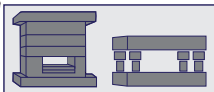
Weight : 4.2 Kg.

MAGNENTIC SEPARATOR

Raw Material - Burr Detacher

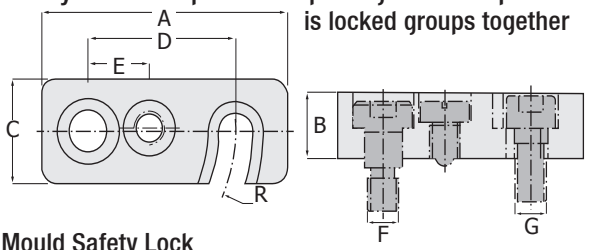
Injection machine holds unwanted metal wastes by sieving raw material that is at the bottom part of extruder.

Order NO : EGM 20 C / 25 C
Weight : 2.7 Kg. / 4 Kg.



MOULD SAFETY LATCH G.103

Safety Lock that prevents opening of mould plates is locked groups together



Mould Safety Lock

G.103 Product is produced by GTH Mould Components. G.103

G.103 x A	1.0503 Steel Forged Blasting/Processing	Especially, while carrying injection mould

Mould Safety Lock: This system is mounted outside of mould. It is for moving mould as packet in safety way without opening. It is mounted to mould with an Cylinder Head Cap S., another Cylinder Head Cap S. slot is opened to the counters side, in addition, connection or easy dismantlement can be done with elevator spring piston. It s a compact product that has not any loosed parts. There are no parts protruding as connection lock.

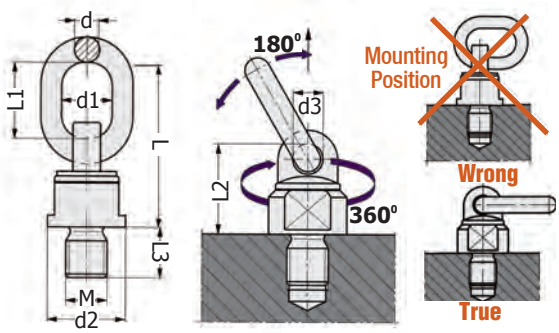
TWO SIDED ROTARY EYEBOLT G.140

Swivel / Lug Attachable at Every Angle



Cargo Eyebolt: By absorbing sudden and rigid motion during transport - bending and breaking of sling / rope /chain that can be occurred due to swinging of load, it will amortise costs above possible damages with safety lifting and carrying. Special Forged Steel (Class 8) Product, 4 times safety against fracture in rotation direction of full load, hinged rotary design that can be taken correct position and be turned axially by aligning movable ring 1800 in loaded position. Mounting/ lifting are important.

BROKEN THREAD SPACE,REPAIR KIT

Pls. renew broken / damaged thread slots with V-Coil Kits ..!

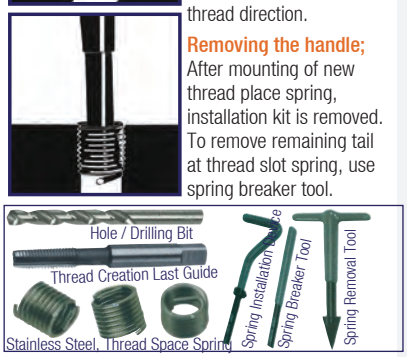
Drilling; Clean broken thread slot with standard drill bit, there is no need to clean for small holes. The sets up to M12 (1/2'') are included suitable drill bits. For fluteless quides, larger holes are required.

Control; Pls. control whether thread and steps of guides to be used at thread slots that will be recreated are paired or not and also place. These sets are also available at our company.

Thread Slot Opening Process;
For opening thread to the cleaned hole after drilling process, special V-COIL Thread Space creating guides are used. Suitable thread cutting oil related to usage should be used.

Thread Slot Repair Spring Placement Process;
After drilling and guiding process at thread slot, pls. insert thread spring to the new thread space to be created into spring installation tool and then insert adjustable ring until spring end is centered at slot end; curl the spring up to half turn downwards with slight pressure. Due that bit can be broken, hence the thread should not be turned to counter thread direction.

Removing the handle;
After mounting of new thread place spring, installation kit is removed. To remove remaining tail at thread slot spring, use spring breaker tool.



Application Areas; It is the most effective method for reparing the damaged threads, thread created that is depended on narrow and full tolerances, is normally more stronger position than original, also it is provided inch /metric changement. The Springs resistant to corrosion and abrasion have long life time, thread slot armour plating during repairing of threads, V-Coil Tools are used securily for more flexible materials having low shear resistance, For example: Machine Productions of Aluminium Alloys or Magnesium Alloys, Electric- Medical - Space etc. Industries.

Recyling the rejected materials is ensured.

PLAIN LUG

WORK PIECE SUPPORT ELEMENT

Rear Thrust for Plain Lugs

For Different method clamp-pings, straightening heads can be used.

Elevator Support Elemen

Trapezoid thread structure, makes product powerful in support riser position and is provided efficiency with different options in support usages, Ø 12mm hole locating on movable riser part provides other straightening heads according to different position. It is in connection of straight seating surface for large - Small work pie-ces, stacked and different device design suitability.

QUALITY DIN 6379 : 12.9

Plain Stud Bolt 1690

Dismantled Set of Connecting Kit

Plain stud bolt are used modular as dismantled set. It is used with lugs and connecting elements individually.

Quality: 10.9

Security Certificated Product

The products up to 180ºC are supplied separately.

Our special production is available as per reqest.

Material: 42 CrMo4 DIN Black Plated Cap Forged Heat Threated

Thread: Hardened (Scrubbed) between two drums.

Two screw two stud bolt together, extension nut is used with plain stud bolt.

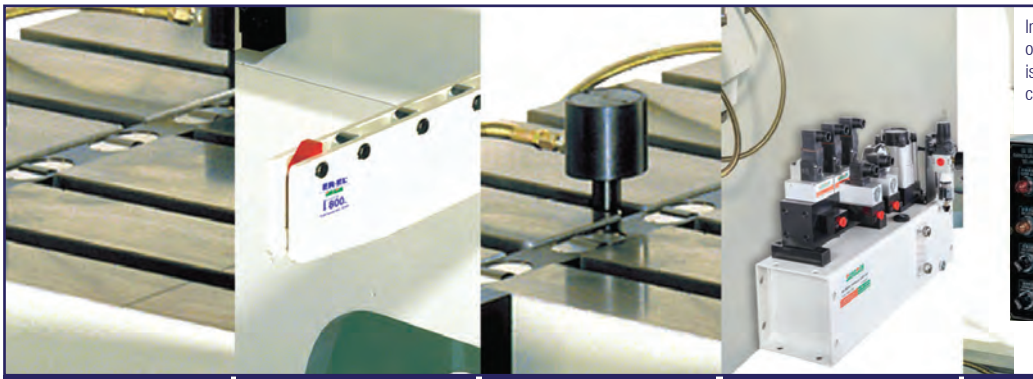
New Technology / Heavy Duty FAST MOULD CHANGEOVER SYSTEMS



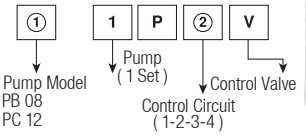
In order to avoid any operation error, safety is designed with control device.

MOULD LIFTING UNIT	MOULD SLIDING ARM	'T' CHANNEL, HYDRAULIC LUG	AIR DRIVE HYDRAULIC PUMP	OPERATION CONTROL PANEL
★ Hydraulic Type ★ 'T' or 'U' Channel Installation	★ 4 Different Usage Options ★ RC - RD - RE - RF - RS	★ CA (Cylinder Type) ★ CB (Block Type)	PB-1P1V Model Pump PB 08 PB-1PP3V Model Pump PC 12	It is equipped Interlock Control Switch related to Electronic Machine.

With fast development parallel with traditional press moulds, in our country where various light/ medium and heavy duty mould increase production efficiency with new technologies, new technology products are applying with high technology in all around the world and are used during mould process especially in automative - white appliances etc. industries, production; manufacturing stage based on moulds are changing quickly, in cases that types and total production are less, by decreasing mould changeover period and especially with work safety. It is high time to pass fast mould changeover system. Application Areas: Press and Hydraulic Press Machines.

HYDRAULIC AIR DRIVE PUMP UNIT

Hydraulic Pump Model Selection



Air Drive, Hydraulic Pump Unit; Hydraulic pump is air driven, when hydraulic pressure reaches the adjusted level, it cuts pumping for saving. On the other hand, if working pressure is decreased, pressure continues automatically to ensure the pump continuity.
Circuit Control System is designed with possible leakage inspection and prevention function. Even when the pneumatic pressure is disabled, hydraulic pressure remains. Characteristics of pressure inspection and connecting to the other machines are available. When application is done with CA or CB -16 or 25 fishplates, to use PC12 Model pump is recommended. In system installation and model selections, our engineers will continue their supports.

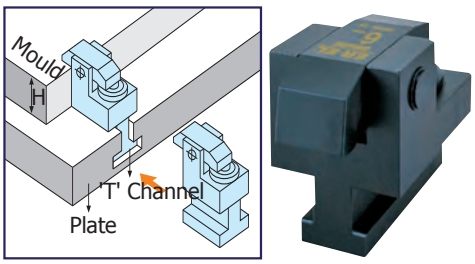
1010-CA25	150	100	55	98	140	45	36	23	PT1/4

Lug dimensions (A),(B) and (C) are specified depending on T-Channel. If lug dimension (H+d) is higher than aforementioned max. values, it is accepted as special production.

Model : CB (At Large plates)

HYDRAULIC LUG 1015 CB ..



Hydraulic Lug Model CA / CB: It is made hydraulic pressing in conformity with traditional pressings. By heightening read piston, it tightens/ pressures lug.

Hydraulic Lug Model: CB (Large Plates)

Hydraulic Pressure: 250 Kgf / cm² (For single unit)

Order - Model	CB 1	CB 2	CB 4	CB 6	CB 10	CB 16	CB 25

NHS -NHSD -NHTS NHTSD Hydraulic Rotatory Coupling

Application: While processing work piece with set, if putting and taking of work piece by operator are disabled and higher connecting power is required, Hydraulic Connecting Scylinders will be the best selection.

Function: This Cylinder has tensile property. Total stroke of it is equal to turning and tensile strokes.

Type: These cylinders are pressed downwards, double motion types in clockwise and anticlockwise are available. It is 90ºC and has 0º- 45º and 60º angles functionally. Single arm or double arm are included to the connection type. For threaded type and O-ring manifold type, bottom flange is included to connection type.

Material: Material of main casing is Aluminium Alloy.

Order Example: NHS (Base No)

T -(Type) Flange - 'T' Threaded

D -(Arm Type) 'D' Double Motion Empty: Single Motion

L -(Direction of rotation) 'L' Left / 'R' Right

TC HYDRAULIC PUSH THREADED Cylinder

Order Example

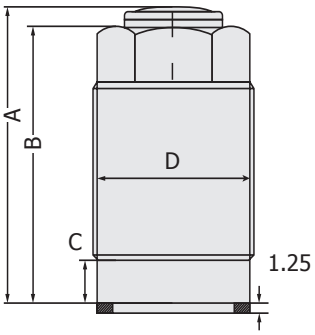
TC	12	A
Order No.	Piston Ø 12 16 20 25	Serial A: Without Female Thread B: With Female Thread

This threaded / casing connecting cylinder works in certain stroke range for conditional push and connecting work pieces safely.

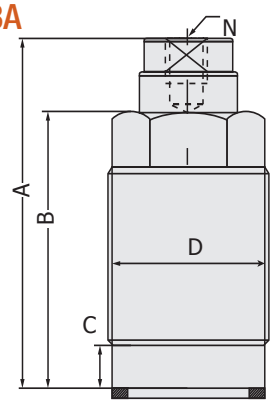
Type: A Serial Pushing out without Piston Gear
B Serial Ejector cylinders related with piston gear (equipment etc)

HYDRAULIC EJECTOR CYLINDER 1053A

Screwed Type, Out Pusher Single Plunger



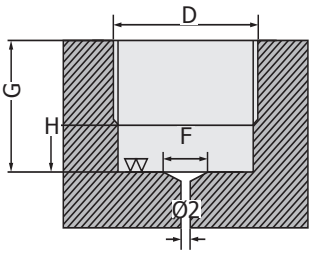
A Serial Single Plunger



B Serial Distributed Piston

HYDRAULIC EJECTOR CYLINDER 1053B

Screwed Type, Out Pusher Equipment Connected



Connecting Diagram

Ejector Cyclinders; While fast connecting the mould or positioning fast work piece or at areas that higher connecting power is required, and also for creating equipment for your tools, hydraulic cyclinders will be the best selection. TC Hydraulic Ejector Cylinders work with the work piece on it upwards at ejector position in certain stroke ranges.

A Serial: It is placed with screwed casing by opening thread to the desired area. Ejector piston face is with radius, and works as point contact.

B Serial: It is placed with screwed casing by opening thread to the desired area. Thread structure existing on ejector piston is in fast connection position and works as ejector with certain ejector by preparing various threaded equipment as per request (Straightening Caps - 'V' Bearing / Pinned Support / Ball support or centering average etc.).

CYLINDER, DIE GAS SPRINGS

Experienced and Reliable GTH Mould Components are the first Die Gas spring producer in our country and present Die Gas springs in your branded products selection, quaranteed products preferred with approval of mould producers and state-of-the-art technology with our sales support and we protect our national capital with **your supports.** Excluding **our standard series**, the products can be produced as per requests;

SN: ISO 9001 Serial Die Gas Springs

(For Practical Usage Information, Refer to Page 113).

Y: Similar with 'SN' Serial, But Higher Series As Force / Kg.

YO: Suitable to Turkey Mould Standard (Less Stroke - High Power)

G: Its power / pressure are the highest - however working life is lower.

KN: It is thin, long and has less power- it is used as extractor at male holders.

AD: They are limited in stocks and are compatible with 'EU (German)' Mould Standards.

KV: Bottom Mounted Threaded, Limited Stocks at 'EU (German)' Mould Standards

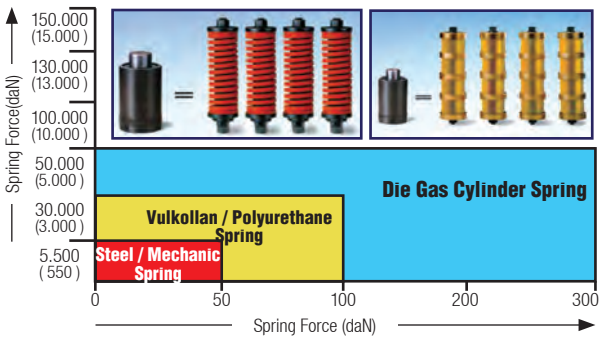
VD: Threaded Casing / Threaded Slot Placement at 'EU (German)' Mould Standards

NM: Threaded Slot diameters at different 'EU (German)' Mould Standards

YN: 5 mm longer than 'YO' series at 'Japan / China' Mould Standards

FN: Similar to G' Series Forces at 'Spain' Mould Standards.

Die Gas Spring Usage Advantages (Refer to Page 113)



We present the Die Gas springs to our customers with materials selected carefully during production, careful quality control at every stage of production, appropriate affordable prices and high quality by applying innovations oriented to research.

Die Gas Springs respond to higher requirements than traditional springs (vul-column / steel spring / dish KPA spring), for moulds requiringhigh force with minimum floor requirement or when long stroke lenght is desired, the solution is prodived with just one complex product. Gas used in Die Gas springs, is environ-ment-friendly Nitrogen (N2) gas found in market, cylinders have the max. 150 Bar (180) Bar filling pressure. This pressure is from 2 daN up to 20.000 daN depending on spring length and type. Provides power, due to that the Die Gas spring Cylinder is filled with nitrogen gase, it can be worked by itself. For safety usage, absolutely should be selected by persons who have Die Gas spring expe-rience in suitable measures and capacities / diversificaiton selection and should be used in accordance with mounting instructions. Different systems cause t hazards and accidents. Instructions are on the back page.

GTH

Die Gas SPRING CYLINDERS: 2 YEAR Maintenance Guaranty (From the date of sale) for the products. Intervention out of Warranty Coverage (Misusages / Heavy Applications, Intervantion to the Piston System / Damages on Cylinder Casing, Applications except Usage Instructions are not covered by the guarantee. Our company will not take any responsibility for these applications, if pressure loss occurs in long term use, this situation shows that the sealing gaskets are worn or damaged. In this case, pls. communicate with our company. All Die Gas cylinders are designed with stroke reserves between 1 and 3 mm.

All Standard Ready Cyclinders are delivered as filled with gas. Empty, refillable gas cylinders are used at serial connection designed systems, also catalogue data are available. While filling, follow the recommended values. Absolutely be sure that piston arm is removed (With 5 Bar Pressure). During unloading, keep the cylinder in the opposite direction. Before disposal of Die Gas spring, be sure that all pressure is discharged. Maintenance and Filling absolutely shoud be done by qualified personnel.

Usage Information: To calculate the first initial force of each cylinder, pls multiply max. pressure application value **(P)** with gasket, rod or piston area of sealing gasket **(S).**

To avoid course risk, it is recommended not to exceed 90% of stroke length.

Example: F(Force daN)= P (Bar / Psi) . S (cm^2)

To obtain different force than nominal **F** value and to specify required pressure level, pls. divide required force **(FN)** to rod or piston area of the sealing gasket **(S).**

In the spring selection, absolutely a spring above criteria should be selected.

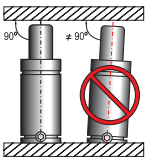
Example: P (Bar / Psi) = **F** (daN) ÷ **S** (cm^2)

Usage Instruction (Things to avoid)

B1

Don't use cylinder except in specified max. values!

B2



Bring Cylinder into vertical position!

B3

Don't make any mechanical process on casing or shaft!

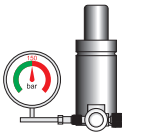
B4

Don't let to contaminte Cylinder surface with liquid or solid substance, in imperative piston, cyliner can be used as reverse

B5

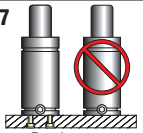
Don't charge cylinder with any gas except Nitrogen N_2

B6



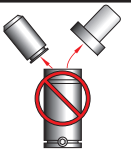
Don't charge cylinder with More Than 150 Bar Pressure !

B7



Don't mount Cylinder without securing!

B8

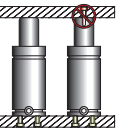


Never remove the cylinder!

B9

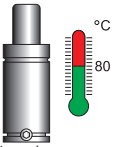
Don't let someone else to make maintenance except the incumbent

B10



While securing Cylinder, don't use hole over piston!

B11



While using gas Cylinder, don't let mould temperature to exceed 80^0

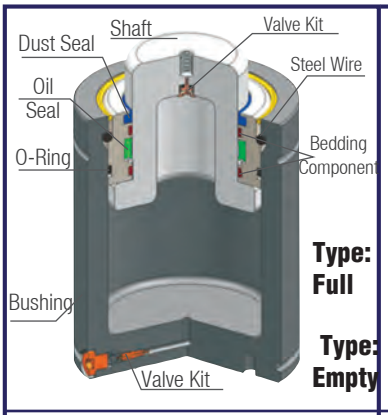
Usage Advantages of Die Gas Spring Cylinder: * Significiant decrease at the required surface area, height, occupied volume and quantity of fixer unit that should be preloaded, directed and fitted. * Mould unit (occupied less space) providing significiant decrease at height for same working range and power * None preload, easier and quick assembly * Always same force at each contact point. Forces can be placed at required place precisely, system pressure is monitored continously (Fixed production are provided) etc.



Serial Connection: Gasless (With Valve)

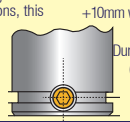
Maintenance : If pressure loss occurs after long period usage or especially some heavy applications, this situation is shows that sealing gaskets are worn or damaged. In this case, the maintenance of your gas Cylinder is done by our maintenance service that you will call. Maintenance service is only for Ø > 50 mm and over cyclinders.



Serial Connection: +10mm will be added to L Length. During ordering, (S) should be added while coding.

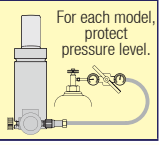
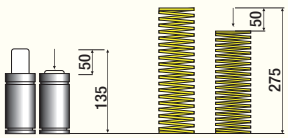
Example Serial Connection SN 10000 S



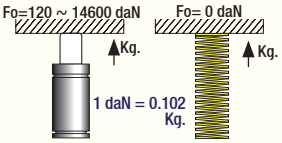
For each model, protect pressure level.

PRACTICAL INFORMATION OF USING Die Gas SPRING & USAGE ADVANTAGES OF Die Gas SPRING

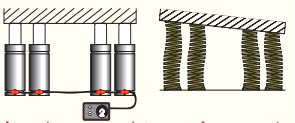
By using thew Die Gas spring, required application area, height, occupied volume, retaining springs for preloading are decreased significantly.



Together with same study course and force increment, significant length decrease, length saving, spring structure advantage are provided.

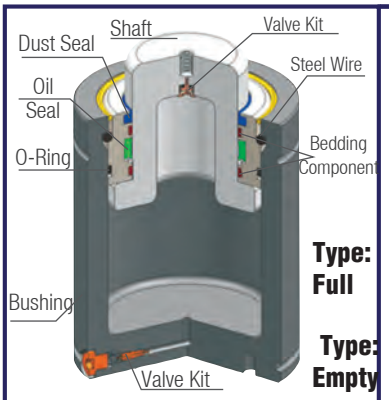


Higher performance, easier and fast mounting is provided with small preloading (0.5 - 1 mm).



At each contact point, same forces can be placed to the pure desired point continously, system can be monitored in terms of pressure.

Practical Information Using Die Gas Spring; At Die Gas spring press sheet mould, more larger - volume high forces can be preferred. In your Die Gas spring selection, piston spring - course - load capacity information are important selection criterias, your designs can be created with working diagrams diameter of our page. Using of Die Gas spring at press sheet moulds in our country, is selected in similar system with practical methods and force balance of mechanical springs. According to this: **Example:** for selection of Die Gas spring can be done 20 % stretching with 6000 Kg. load coefficient and be given 20 mm's course value, it is completetdh with that 10 Pieces Mechanic Steeel Yellow Spring ~ (6000 Kg.). In case of that Die Gas Spring is selecteed instead of this, by using **YO 700 - 25** Serial (Ø 45 mm / Length: 82 mm) **Course:** 25mm - **Diagram:** 1330 Kg. x 4 Pieces is sufficient. 5850 Kg. (10 Pieces Mechanic Yellow Spring) ÷ 1330 Kg. = 4 Pieces Die Gas Springs are sufficient for this position. Thus, (6 Pieces) Steel Saving are provided. By increasing **examples**, at greater diameters; spring quantities will be decreased / forces are increased. First and foremost, spring area will be decreased at your mould, technologic and economic gains will be supplied.



Serial Connection: Gasless (With Valve)

Section Press Mould

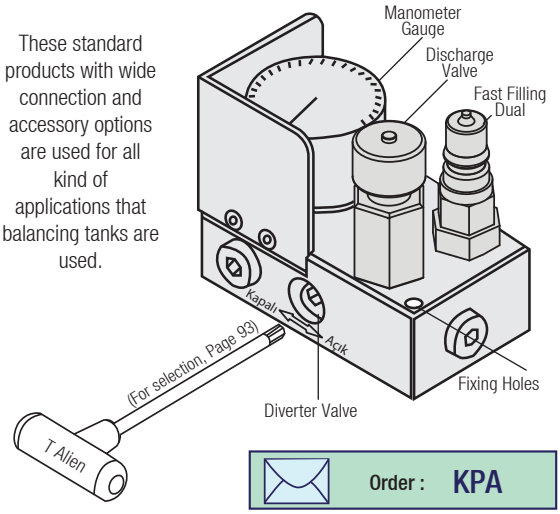
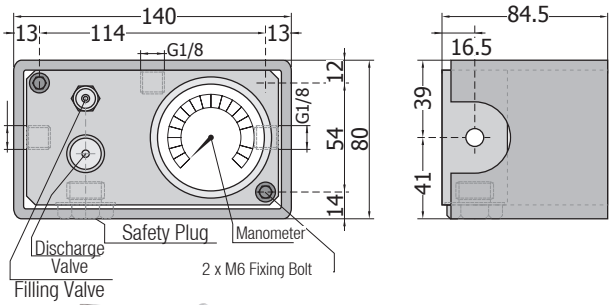
These standard products with wide connection and accessory options are used for all kind of applications that balancing tanks are used.



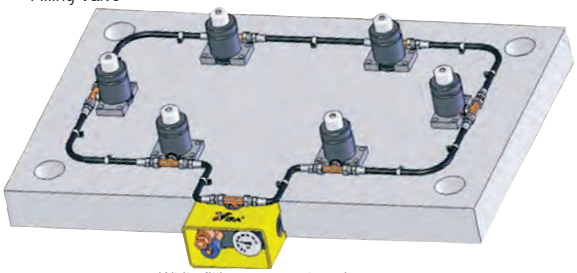
SERIAL CONNECTION: CONTROL PANEL KPA

Serial Connection Systems, Router Unit

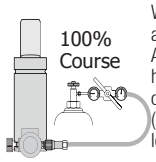


Order : **KPA**

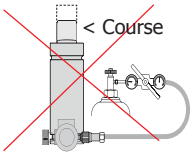
Standard Control Panel to change pressure, to adjust and to control fastening system.
It is consisted from manometer connected, steel plate, filling and discharge valves, 3 Pieces Outlet and steel casing that safety disc can be connected when desired.

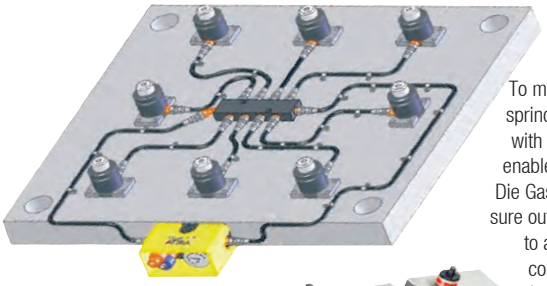


SERIAL CONNECTION, PRACTICAL EXAMPLES



While filling, ensure that piston arm is **100 %** removed.
At cyclinders not having threaded hole on rod, to remove arm completely, first fill up to **Bar 5** (**75 psi**), then fill up to required level.





To make Die Gas spring connection with a system, it enables to monitor Die Gas spring pressure out of mould and to adjust and correct it by reincrease gas.

Controlled Ganifold Systems assy Spring
Designed by the User

While controlling Die Gas springs, remove Die Gas spring valve absolutely!

HRM 8	M8 x 10

Order : **HRM X M**

Material : 1.1731
Superficially hardened

For M6 and M8 Threaded Piston Shaft, Die Gas Springs:
It is a useful product that protects piston head and absorbs clamping occurred on mould. Our company also recommends to use Die Gas Springs. In cases that stamp comes inclined or if there are parts that are displaced laterally, hardened compression pad decreases lateral pressure. Using pressure plate with compression pads, lateral load resistance of Die Gas Springs is increased. This is made by decreasing friction, even in cases that compression pad is not used, using the compression plate will be very useful for your system.

G.113.122	> 6600 - 10000	167	150	112

Shock dampener clutch plates are designed to minimize main problems of press mould in sheet processings. Specially designed shock inhibitor unit has been developed to reduce following the issues.

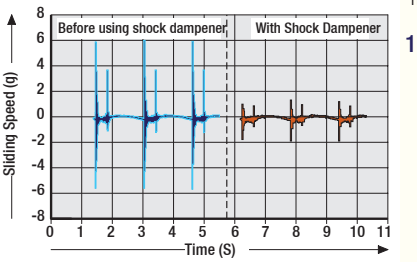
- Excessive Impact Amount
- In terms of press and high costs developed correspondingly
- High Volume Levels
- Low Quality Production Risk

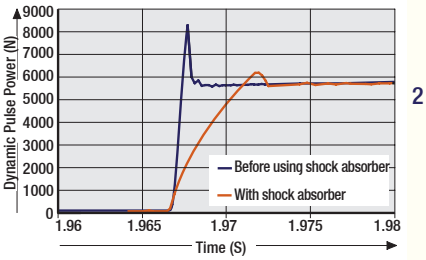
In case of using shock inhibitor clutch plate Die Gas Springs:

* After maximum 3 mm's shock dampener course, Die Gas Spring shock dampener compression plate reaches its previous spring Power.
* Shock inhibitor compression plate should be mounted between mould plate and Die Gas Spring piston shaft.

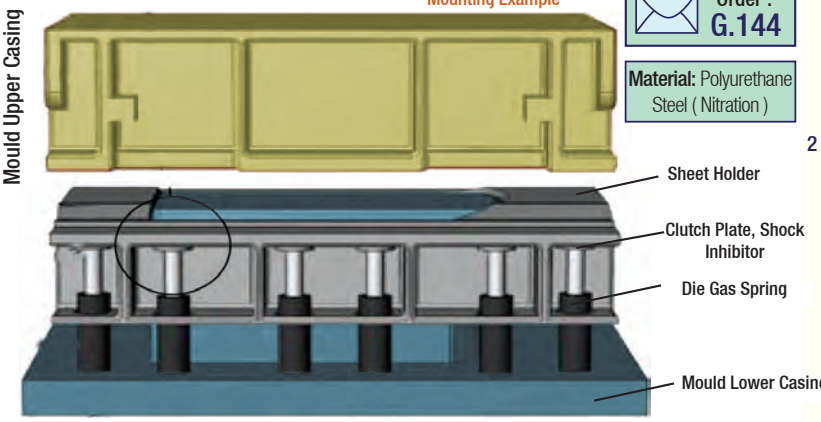
Working Temperature : Between 0°C and 80°C
Recommended Stroke / Min : 20
Max. Stroke Speed : 1.6 m / s
Max. Shock Inhibitor Course : 3 mm

Shock Dampener, Working Diagram (Function)





Mounting Example



Order : G.144

Material: Polyurethane Steel (Nitration)

APPLICATION OF

Die Gas Springs faciliate storing and preparation of moulds for production .

Using Die Gas Springs at great sheet mould is becoming increasingly popular. This system faciliates to storage moulds and shortens the time between storage and production. Die Gas Springs are mounted to both upper and lower casings. The processes over Die Gas Springs should be done after removing the mould from the press.

At application example 1 and 2, special compression head is shown, when these products are in mould press, before compressing, Die Gas Spring is placed to the place that piston will be pressed. During removing from press or storage, upper mould casing stays on Die Gas Springs. Wedge pins are for security after Die Gas Spring. When moulds are stacked, increased weight can cause crushing of springs, in this case, they are fitted on upper mould wedge pins. When upper moulds are removed, Die Gas Springs lift the upper casing again.

While preparing for production, springs enable reach various parts of moulds. When mould is connected to mould press, before stamping, wedge pins and head should be removed.

In significant Status: Warning signs should be placed on the mould. Die Gas Springs on mould may not be visible from the outside.

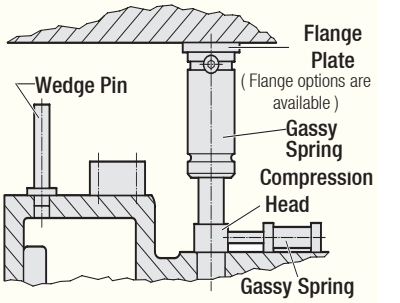
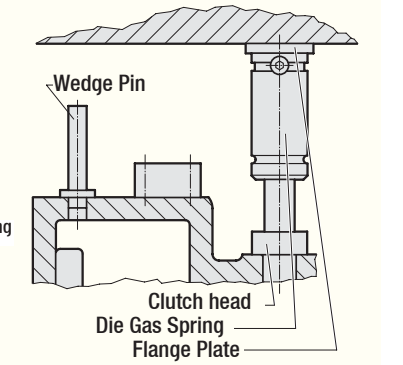
2 - Die Gas Spring Mounted to Lower Casing

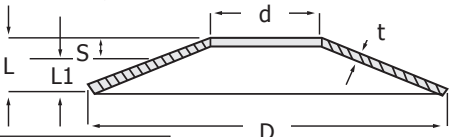


2 - Die Gas Spring Mounted to Upper Casing



DISC / DISH SPRINGS DCY

Short Springs Fixed With DIN 2093 Shaft



d: Spring Inner Hole Dia
D: Outer Spring Dia.
t: Spring Thickness
L: Free length
L1: Loading Length
F max: Flex Force
S: Flex Length Course / Motion

Disc Springs: At very short working courses, it provides resistance to higher forces. The advantage of springs with very short spring is that when the pressure is applied, it produces high power with less motion. Disc springs sometimes can be used alone and also as stacked Array Sets.

50 CrV (-15 / +1500 Resistance) Heat Resistance N (-25 / + 200) Voltage

Dish Spring Working Courses: Applied Forces (F/ N) should be designed according to the working courses. Specifying the working courses should be according to the hole thickness (t) internal wall. L: 0.25 (1/4) or 0.50 (1/2) of free length. In addition, with motion up to 0.75 (3/4), different forces (F/N) per each course value may be applied . F =N / S = mm / course

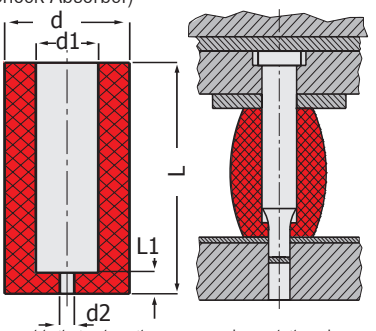
POLYURETHANE PUNCH STRIPPER

HSS Overspreads on HSS Punch

(Shock Absorber)



At moulds that polyurethane scraper is used, there is no need to dismantle scraper plate to make repair whetting and modificaiton on mould components, there is not any effect on presicion parts, it is excellent for all painted / anodized, plastic plated and polished parts. It is compatible to use with oil and grease. Overspreads on poliurethane scraper punch. Placement is done according to the scraper hardness. There is no need for extra holder. Stepped-Punch hole will be opened at first stroke of press and scraper edge. Especially, at large moulds requiring very wide scraper plate, this product is very compatible.

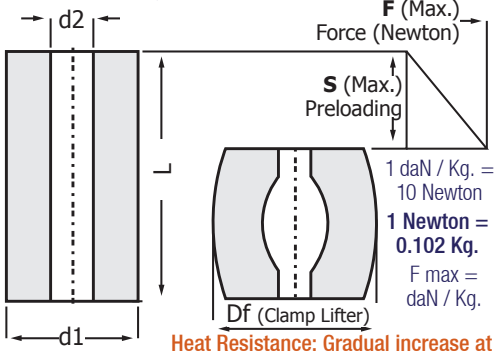
Polyurethane / Elastomer Springs:
In cases that parts will be produced in small amounts, making expensive mould designs are not recommended. For such situations, we present the **GTH** affordable alternatives in our catalogue. Polyurethane springs such as cushion Guide Screw, scrapers, extractors, forming pads and spring components.

POLYURETHANE, MOULD COMPRESSION SPRINGS



PM...

Heat Resistance: Gradual increase at hardness under70^{0}C / 18^{0}C

Polyurethane Springs: They do not create any problem at water / oil emulsions (resistance to thermal shock). There do not have any abrasion effecs that can be distinguished with fixed and high load under normal temperature and environmental conditions at serial motion moulds. Especially, they are efficient in ambients that do not require magnetization. Forming elastomers can be processed with ordinary machine tools as well as can be process with traditional cutting tools (with sharp cutting edge). Polyurethane compression spring is incompressible material, spring load is obtained by extending outwards. Most of the expansion is reflected outwards, **when desired higher flexion, selected spring is cut into two pieces from center, then metal thick shim is inserted, thus flexion is increased two times. Pin Diameter** of polyurethane compression springs should be less than the inner diameter of spring.

According to the flexion rate, selection of perforated polyurethane spring (Yellow / Red)

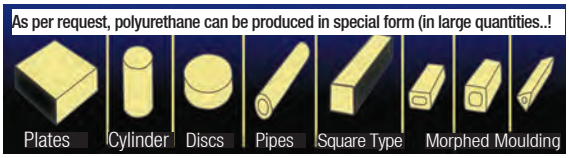
New Design: Polyurethane springs can be ordered as 310 mm in our sales system. **In addition, it** can be ordered as cut/short length from our stocks as per request (By following the table).

Order **PY...: B** (Empty)**-D** (Full) Colour: **S** (Yellow)**-K** (Red)

Example : **PYSB . Ø** (Perforated yellow) **d1 / d2**
PYSB.16 (Yellow colour perforated / Empty Type)
PYKD.16 (Red colour Full Type)

As per request, polyurethane can be produced in special form (in large quantities..!

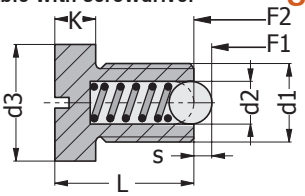


Order : Short Length
PM.. Colour (S /K) **d1 x L**

Section Press Mould

SPRING EJECTOR

Fixable with screwdriver **SBS**



It is for locking, compressing upwards and downwards. It can be dismantled with screwdriver.

Heat Resistance Maximum : 250^{0}C.

d1	L	s	d2	d3	F1	F2	K

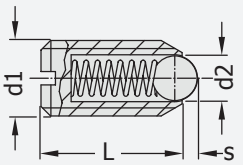
Order : **KBS** x d1

Material : Steel Quality 5.8

SPRING STOPS

Fixable with screwdriver **BSM**



Usage Area:
- Fixation
- Pulling, pushing
- Extractor
- Compressing

It is used as core lock etc. in injection mould, as stamp extractor in press mould and also can be used for bedding of female shafts, limiting the torque tools and positioning of level adjuster.

Processable Steel Busking - Hardened Bearing Steel Ball - Winding steel spring

Maximum Heat Resistance 250º

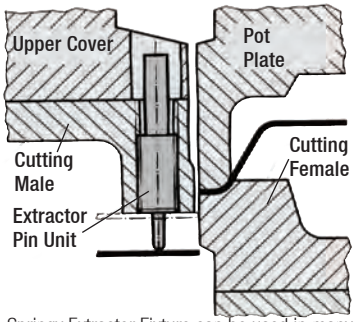
Mould Component Production GTH



SPRING EJECTORS

It is secured with Alien and is locked with podger.

It is for locking, compressing upwards and downwards, the lock prevents the reaching of liquids and oils to the pin. **PS1**

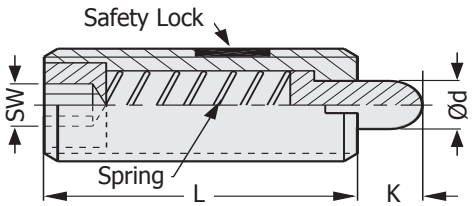
Working Temperature: From -30ºC to +80ºC

Pin: Polished Steel

Don't exceed force values specified in the table.

Springy Extractor Fixture can be used in many designs such as mould and equipment production. Especially, it is operated as extractor - dampener - stabilizer and retaining pin.

Podger
(Page 132)



SPRING EJECTORS

It is secured with Alien and is locked with podger.

It is for locking, compressing upwards and downwards, the lock prevents the reaching of liquids and oils to the pin. **PS2**

Working Temperature: From -30ºC to +80ºC

Pin: Polished Steel

Don't exceed force values specified in the table.

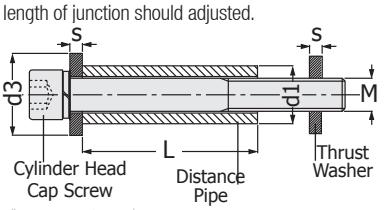
G.71

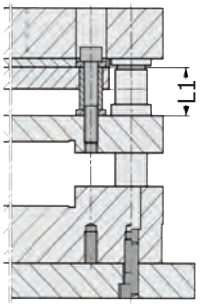
INTERMEDIATE DISTANCE SAFETY BOLT

Installation of press mould springs and inter support

Assembly of spring and gap unit :

Guide Screw Plugs are grinded equally after mounted to punch holder. When punch are grinded, for loosing distance pipe as 1 mm, the length of junction should adjusted.





Mounting Example press progressive mould intermediate safety bolt

Note :
This product is with O Ring and O-Ring should be removed before mounting.

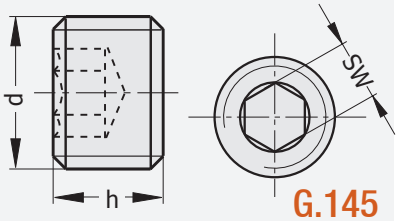
SPRING COMPRESSOR SET SCREW

Adjustable Spring GUIDE SCREW (Ø10~40 mm)



G.145

These set screws can be used as adjustable spring stoppers.

From Ø 10 mm up to 40 mm. They are available at our stock for all standard steel springs. Spring tension can be adjusted from bottom plug (set screw) with allen without doing any dismantle process. Steel springs can be changed from bottom plug (set screw) slot without dismantling mould. To place spring, open hole should be created instead of blind hole.

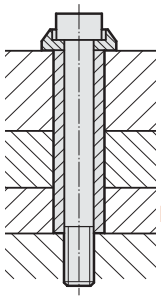
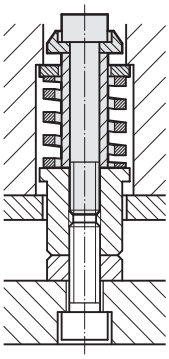
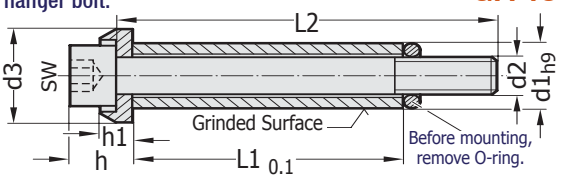
Material : 1.0503 (C 45)





This product is an alternative of the hanger bolt.

SPRING FIXING /GUIDE SCREW G.146



Spring Fixing and Guide Screw Equipment: Due to that it has been grinded, it provides very precision length setting that can be adjusted. Different usage types can be created (Mounting Examples) Interval Tube (Pipe) Tensile Force: 1200 -1300 N / mm^2 Externa diameter is grinded at h9 tolerance. It is with Cylinder Head Cap Screw. Guide Screw equipment is supplied with O-ring, O-ring should be removed before mounting.

ROUND WIRE STEEL SPRINGS

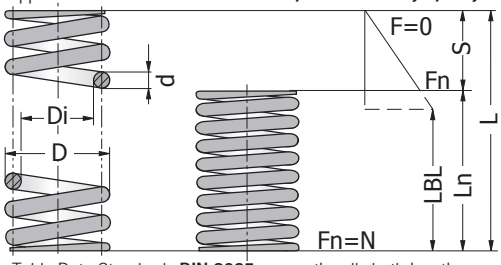
Standard Performance Special Winding Springs



ForceThese springs from spring steel as winding /with high tension heat treated are used in Table Data Standards **DIN 2095m** or optionally both inactive and oscillatory loads. Optionally; they can be used in cases that are posed due to severe, hard impacts and vibrant load or when there are high expectations from spring life. Both types have flattened, forged coils and their surface are homogenized with shot blasting process.All springs are supplied as lubricated. Max. WorkingTemperature:200ºC. **All these springs can be produced in the desired lengths and diameters.**

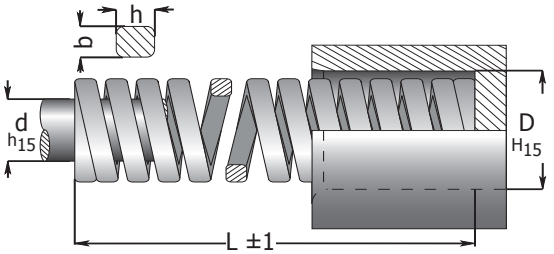
HIGH PERFORMANCE STEEL SPRINGS

Rectangular, ISO 10243 Mechanical Import Mould Springs



TECHNICAL SPECIFICATIONS AND PRODUCTION CHARACTERISTICS

Research and development ongoing in parallel of Quality Assurance Procedures in compliance with ISO 9001, ensure high sensitivity, durability and reliability Criterias.

Continous improvement in special spring performance is monitored directly in the factory through comparative and destructive tests. The excellence of these products are verified with the increasing number of the customers selecting special springs in their moulds.

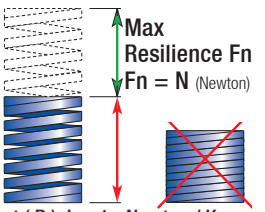
The following main characteristics show the superiority of special springs.

* Spring steel produced only in accordance with the special spring decriptions,
* Special profile /section usage to increase steel characteristics,
* Usage of special spring winding machine,
* Usage of special heat treatment developed by the special springs,
* Maximum care showing grinding and closing of spring ends in order to guaranty optimum vertical and parallel acceleration,
* All springs are coil shaped in order to guaranty significiant decrease of load losses in working conditions,
* Special remoulding stroke methods in order to increase resistance against metal abrasion.
* Special pretreatment and powder coating applications of special springs in order to ensure the best protection, preservation and completion,
* Intensive control performed during production and final stage in order to quaranty dimensional compliance and sensitivity,

Spring Load Coefficient Tolerances - Nominal Rate at All Springs + 10%.

Table Values/Explanations of the Spring Pages

Spring Dimensions		Length	Load	Spring Capacity / Recommended Resilience - Criteria			
D	d	L	LOAD COEFFICIENT R (±10 %) Required load for 1.0 mm resilience	%..A Long Spring Life 3.000.000	%..B Maximum Resilience 1.500.000	%..C Minimum Resilience	%..D Full Resilience
b x h							
mm	mm	mm	N / mm	mm x N	mm x N	mm x N	mm x N



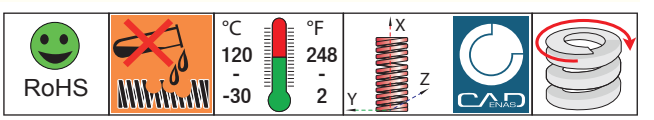
Code	Colour Series	Wire Section	Colour	Load	Max. Resilience	No
AY	Special Springs 		Light Green	Extra Light	50 % Length	Page: 139
Y	ISO 10243 		Green	Light	40 % Length	Page: 140
M	ISO 10243 		Blue	Me-dium	37.5 % Length	Page: 141
K	ISO 10243 		Red	Heavy	30 % Length	Page: 142
S	ISO 10243 		Yellow	Extra Heavy	25 % Length	Page: 143
G	Special Springs 		Silver	Ultra Heavy	15 % Length	Page: 144

Force = Resilience (A.B.C.D) x Load Coefficient (R): Load x Newton / Kg.
1 Newton = 0.102 Kg.

Minimum Working Life Showed with Spring Usage:

* Select springs carefully during the design stage,
* Guide springs having free length and exceeding 3,5 diameter rate with guide pin,
* Ensure support and perpendicularity of springs to the printing area,
* If possible, use long springs at lower loadings (Preloading should be increased properly),
* Apply minimum preloading of 5% of the free length.
* Never apply thrust to the springs over maximum course,
* In case that mould components are reprocessed, check the installed length and working length of springs. Normally, after resprocessing, spring thrust rate will be increased after reprocessing.
* Protects springs from abrasive activities.
* Don't exceed 250º C working temperature, while increasing to 120º C, significiant loading decrease is not seen, at each 40º C over this temperature, 1% loss should be considered.
* Don't change a spring at a time, instead of this, use programmed maintenance procedure that all springs can be changed at the same time.
* Don't change physical characteristics of springs. (Cutting- Internal or external bending) If the above conditions are not followed , minimum life time will be decreased in the shortest time. When used properly, as stated by all the users of special springs, performance levels over minimum lifetime value specified in graphics are reached.

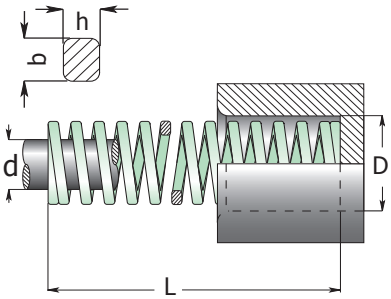
External diameter of spring, is smalller than slot diameter. Slot diameter should be greater. Internal diameter of spring is greater than pin diamater, pin diameter should be smaller. **In usage of precision mechanical spring; GUIDE SCREWS should be used.**



SPECIAL SPRINGS

PERFORMANCE STEEL SPRING

Rectangular, Import Mould Springs



LIGHT GREEN SPRING - AY

Extra Light Load

Especially suitable to Injection Mould Systems Extra Light Load Serial Rectangular Mechanic Springs 10243

Long Life usage of Steel Springs: It depends on the quality of spring material, working conditions and design conditions that are used.
Don't forget! The cheapest spring is the one selected properly.
In all applications using springs, preloading and compression rates specified for long life usage should be adhered. Appropriate tension values can be found at the loading value table and tension/ spring life table.

By multiplying spring coefficient (R) with compression amount (mm) simply, spring force value is reached. (N) Example: R x (A.B.C.D) x

1 Newton = 0.102 Kg.

For long life usage, shear stress on the basis of oscillation should be maximum 800 N /mm^2. 400 N /mm^2 of this value will be used by the stress variation on the basis of spring oscillation.

Order :
AYY (Light Green Spring) **.D x L**

Usage: It is compatible with extra light load spring and especially injection mould systems and equipment designs.

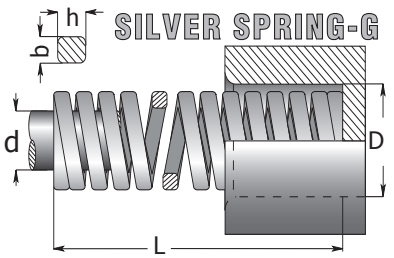
Order : SY (Yellow Spring) .D x L

Usage: It is compatible with extra heavy load spring and especially injection mould systems and equipment designs of machine production.

Technical Information! Page 138

PERFORMANCE STEEL SPRINGS

Ultra Heavy Load Spring



Short Stroke, High Power, Heavy Loadings

By multiplying spring coefficient (R) with compression amount simply (mm) spring force value is reached. (N) Example: R x (A.B.C.D) x

1 Newton = 0.102 Kg.

Application Information For Long Lived Usage of Springs;

High tension levels only should be used when limited life is expected or in case of static loading. Under dynamic loading conditions, at the same time, exposing column spring to extraordinary temperatures, tensile loadings, lateral loadings, sudden loadings and high frequency usage limits the life time of springs. In all these cases, decreasing of tension values assists in terms of better spring life.

Limited Stocks; Delivery Period As Per Order

Order :
GY (Silver Spring) **.D x L**

Usage: It is compatible with ultra heavy load spring and especially injection mould systems and equipment designs of machine production.

Threading (Punch/Bushing) Kit For Perforated / Punched Holes

Order Code :
VYZ..

SCREW SLOT FORMING UNIT

Screw Slot Forming Kit; It consists of three main parts. **1-** HSS Drilling Pin **2-** Pin / Emboss Punch - Bearing Bush **3-** Pin / Punch Emboss Bushing / Bush. **In terms of Working Systematics;** in all sheet cutting and forming moulds and press machines, it creates screw slots with the purpose of connecting two sheet plates with perforated front holes.

Usage: By placing HSS Drilling Pin into bearing bush, it is brought to stamp operation, while emboss conical angle in edge form of bush bends the sheet plate outwards direction, HSS Pin in it is shaped in hole form. Thus, the sheets to be connected with screw become ready for screwing. **Unit,** while screw forms hole in thread dimension tolerance, it prepares helix thread channels with emboss for screwing and clamping (Connecting).

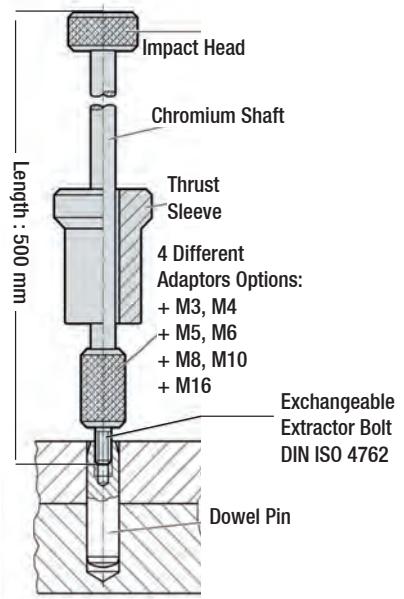
PIN PULLER

Complete Set Dowel Pin Puller

DIN EN ISO 8735 - ISO 8735 **CTPC**



This product is designed to dismantle threaded dowel pins quickly and safely, in addition it can be used on other threaded machine components.
This extractor tool is supplied in plastic bag with adaptors between M3-M16 to dismantle all kinds of 7979 dowel pins.

Order :
CTPC
(PIN PULLER)

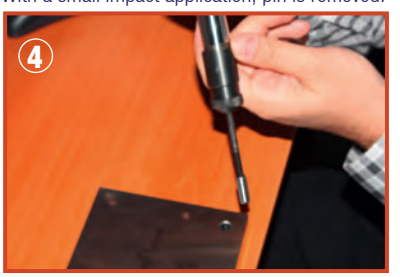
PIN PULLER

Mounting Example

Adaptor is inserted with installation.

Screwing is done on retaining pin.

With a small impact application, pin is removed.

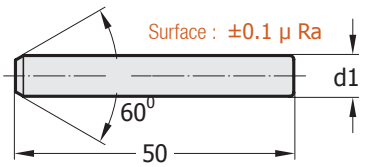


Extracted pin is removed from adaptor.

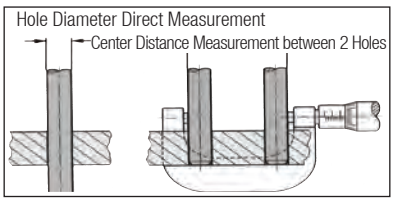
PRECISE MEASUREMENT PIN KIT

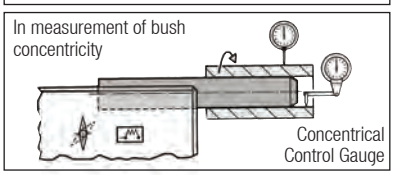
Pin Control Gauge Kit **PKMS**

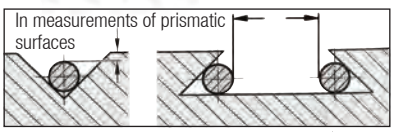
DIN 2269 - Dia. Tolerance : ± 0.001 / 2

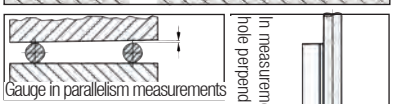


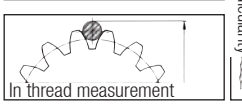
Small Set: 91 Pieces Measurement / Control Pin Between **Ø 1 -10 mm. In 0.1 mm** stepped complete wooden box.
Large Set: 273 Pieces Measurement / Control Pin. Between **Ø 1 -10 mm. In 0.1 mm** stepped complete wooden box. For each pin, over **0.01 mm** and under **0.01 mm** pins are available. In addition, pins are protected with plastic tube. The measures of all measurement pins over 3 mm are stamped on them.

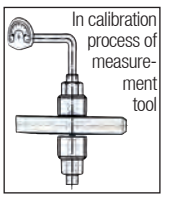












Material : HSS 1.3343
Hardness : 62 - 44 HRC

Order :
PKMS .1 Small Set
PKMS .2 Large Set

Mould Components
GTH

NOTE !

Threaded Dowel Pins
When used as thrust, their place should be determined in a way that their thread is as far as the waste distance from female cutting edge. In some cases, pin slot is opened away from cutting edge and pin is selected according to this.

HSS COUNTERSUNK PUNCH HBZ..

With our wide range and dimensional products of GTH Press Mould Punch and Matrix Sets from our shelf stocks, we are in top location with our sectoral experience in quality / price formation, in addition we meet other special requests with the shortest delivery time. **Continous Stocks**

Countersunk Form D HSS Punch: Material - 1.3343 completely grinded, heat treated (62-64 HRC ± 2) Head Hardness: (52 ±3) Surface ≥ 950 HV 0.3. It is for durable parts in all kinds of drilling / cutting moulds. Also, TIN / TIC Plating completely or partially (by providing resistance against heat and friction on external layer), it remediates problems such as winding and cold welding, plating thickness is 2-4 Micron. It is preferred when sheet thickness is thin). For harder work pieces, **ASP** (Powder Metal) and for very hard and abrasive work pieces, sintered carbide punches are preferred.

HSS HB. STEPPED-PUNCHES

DIN 9861 Form C — HKZ..

According to DIN 9861 Norm, there is limitation for casing and cutting diameter. In this norm, while casing diameter for countersunk stepped punch is 3 mm, cutting diameter can be maximum 2.95 mm. They have robustness and long term cutting power in stepped punches of press moulds.

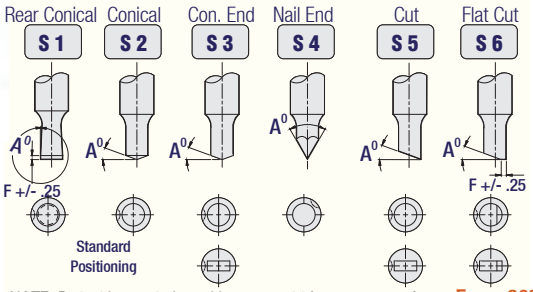
Shape P,W ± 0.1	◎ 0.2	From P to 3

Standard position of flat surface is 0°, as per request, it can be preferred as 270°.

Order: Punch shape selection, technical drawing details and also usage information are required. (Example: SBY x P) **Technical Information!**

CUTTING ANGLES (Special Kits): While ordering, " A " angle and " F " dimension absolutely should be specified by user.



NOTE: By looking at their position at mould from upper surface of mould, parts are displayed. Positions of punches are determined by looking along casing. It is determined by monitoring from the upper surface.

From 90° to 270°

HSS CYLINDER HEAD PUNCHES

Mounting of cylinder capped type punch to the holder plate during usage is planned, guiding process is provided by the scraper plate, by mounting punches in this style, to eliminate axial errors that resulted from incorret mounting or press of Mould Base is more easier. By using this connection type, decomposition between transmission and bedding of drilling power has been provided.

Continous Stocks

DIN ISO 8020 A Cyclinder Head Punch, Material 1.3343

Completely Grinded Heat Treated (62-64 HRC ± 2). Head Hardness (52 ± 3) Surface ≥ 950 HV 0.3 It is for durable parts in all kinds of drilling / cutting moulds.

Also, **TIN / TIC** Plating completely or partially (by providing resistance against heat and friction on external layer, it remediates problems such as winding and cold welding, plating thickness is 2-4 Micron. It is preferred when sheet thickness is thin). For harder work pieces, ASP (Powder Metal) and for very hard and abrasive work pieces, sintered carbide punches are preferred.

DEFINITION OF CAVITY BETWEEN PUNCH AND MOULD

Cavity between punch and mould depends on material type of stamped work pieces, material thickness, hole diameter and desired tool life.

It is expressed as total percentage of stamped material thickness. It should be remembered that hole diameter of punch specifies the dimension of part to be processed. Generally, ideal cavity provides serial, clear and smooth drilling process with minimum tool force. When left with unsufficient cavity, minimum radius and burrs are obtained. However, depending on high tool forces, it shortens tool life. As a result of excessive cavity, wide radius creates deformation, but tool life is increased. Some general values are presented for different materials in the following table (It is advisory). Expressed values are total mould cavity recommended for unused ejector punch holes. Increasing cavity to 2 times by using ejector punch, will be significiantly increased estimated tool life. Abrasion Occurring in most of the punches occur by scraper forces. Increasing cavity with using ejector punches will hold abrasion on tool surface in minimum.

Punches used in press mould should be mounted in perpendicular position as 90° completely. All of guide plates and female mould hole axials should be created completely grinded, with reamer and precision.

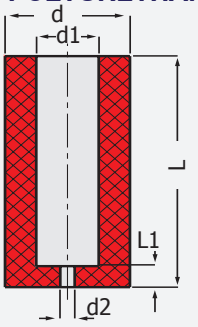
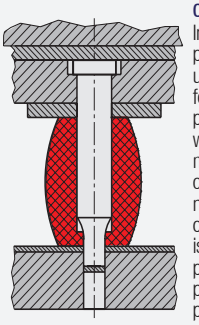
POLYURETHANE PUNCH SCRAPERS PYB





Continous Stock Product

In mould that polyurethane scraper is used, there is no need for dismantling scraper plate to make repair, whetting and modification on mould components, there is not any slightest effect on precision parts, it is excellent for all painted / anodized, plastic plated and polished parts. It is compatible to use with oil and grease. It is covered on poliurethane scraper punch. Positioning is made according to the scraper hardness. There is no need for extra holder. Stepped punch hole will be opened at scraper edge with first stroke of press. Especially, this product is compatible at great moulds requiring great scraper plate.

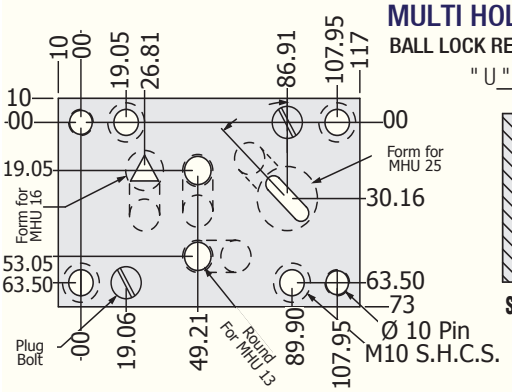
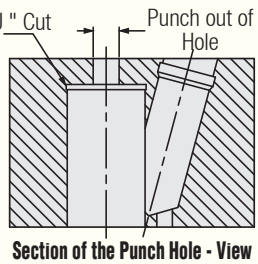
MULTI HOLE, BALL LOCK SPECIAL RETAINERS

BALL LOCK RETAINERS





Section of the Punch Hole - View

Unless otherwise specified, "R" ball slot quality will be provided.

Hardened bolster plates of multi hole ball lock holders are shown in two different examples as traditional and integral holder in technical drawings, the point that should be considered is measuring of retainer starting from the left upper corner and that zero starting point is positioned correctly on mould by taken punch or pin holes. Thus, display helps positioning of punch holder conveniently and provides to match with its position on mould or punch bush in CNC programming.

Ball Hole Quality — Radial Tol.

R..... $+5^{0}$

BALL LOCK EJECTOR PUNCH

HEAVY DUTY, Ball - Lock Ejector / Springy, Launcher Punches — BAFZ

Casing and cutting edge are precision grinded.
It is for durable parts in all kinds of drilling / cutting moulds. Also, **TIN / TIC** Plating completely or partially (by providing resistance against heat and friction on external layer), it remediates problems such as winding and cold welding, plating thickness is 2-4 Micron. It is preferred when sheet thickness is thin).

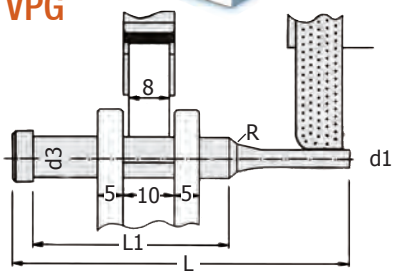
Weight : 6.6 Kg.

Order **VPG**



Working System:
Bench Grinding **Manual** System Equipment

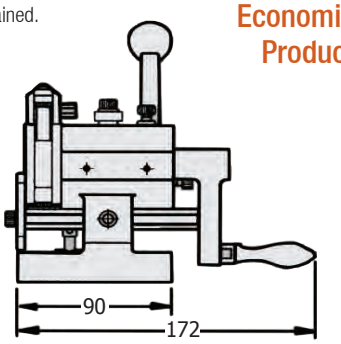
* It is used in cylindrical or stepped form grinding operations of ejector pins - punch and EDM Work Pieces surface on grinding machine.

Pin Capacity: ..... 1.5 mm x 25 mm

* Pin: When precision wheels are fixed, center of work has been specified automatically.

* Thanks to rigid connecting system, grinding distance from 5 mm up to 35 mm can be obtained.

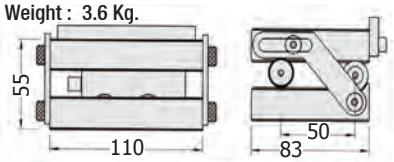
Economic Product



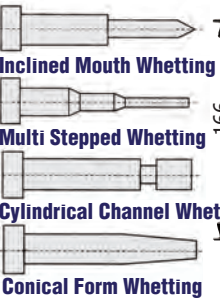
SINE - ANGULAR TABLE
For Pin Forming Equipments

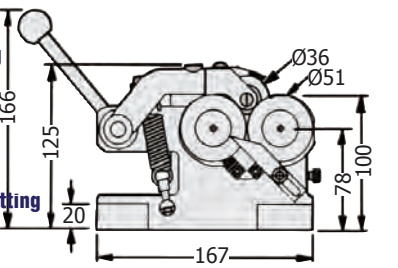
Order **VSP-S**

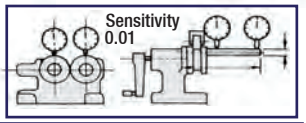
Weight : 3.6 Kg.

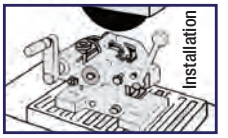


Some Sample Whetting Studies

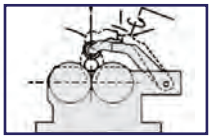




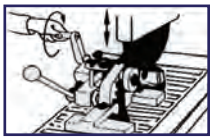




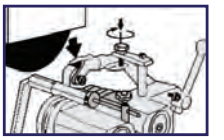
Lift depressor arm. Insert pin into its slot. Tight depressor arm screw.



When pin is placed between precision wheels, center is found automatically.



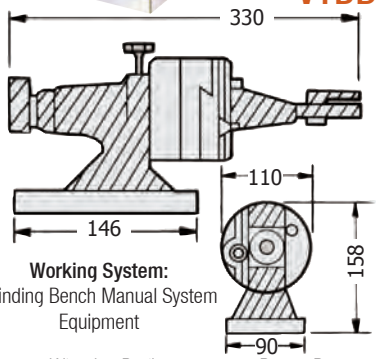
After connection equipment grinding machine, start whetting by turning arm.



Before starting grinding, ensure that all support and Guide Screws are tightened.

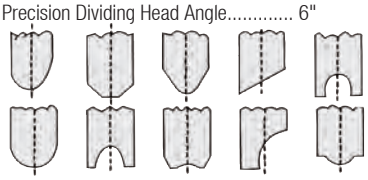
STONE FORMING EQUIPMENT

Order **VTDB**



Working System:
Grinding Bench Manual System Equipment

Convex Whetting Radius..... 0.8 R - 40 R
Concave Whetting Radius..... 0 - 40 R
Max. Grinding Machine Stone Dia. ..... Ø 250 mm
Turning Angle..... 4 x 90^0 = 360^0
Precision Dividing Head Angle..... 6"



* Precision Centers height is obtained with positive cutting angle, diamond dressers.
*Thanks to precision grinded dove tail slides, absolute distance shifts are prevented in the desired distance.
* By providing control from one point, convex and concave whetting forms are provided precisely and quickly.
* All working surfaces and measuring scale is 60 HRC'.

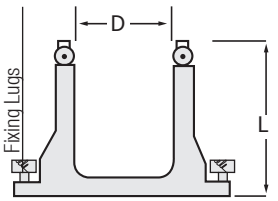
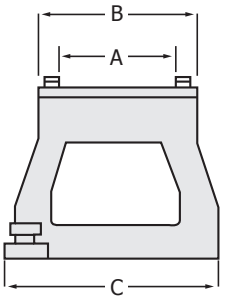
Balance and flatness of part can be monitored by sliding suitable size round work pieces that are between slides on unit slides.
LBS 100 Maximum Diameter 200 mm.
LBS 350 Maximum Diameter 350 mm.





BALANCE STAND LBS 100 - LBS 350

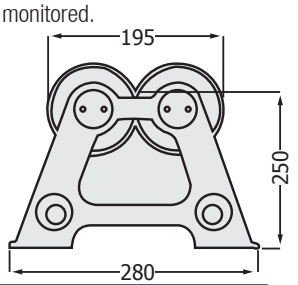
Order	A	B	C	D	L	Kg.
LBS -100 Ø 200	137	152	225	110	175	8.8
LBS - 350 Ø 350	160	180	260	125	235	15.1

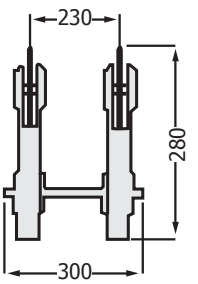
PRECISION BALANCE MEASURING STAND

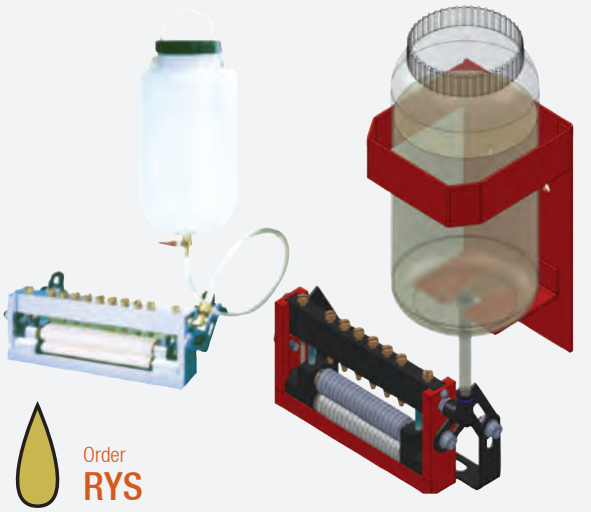
Order **WBS 300**

It helps to measure and develop grinding sensitivity correctly. All surfaces of high precision measuring stand are 55 HRC Steel Cast Casing.

Precision measuring stand / disc - rotary model are placed on round work pieces. By turning work pieces, its balance and flatness are monitored.



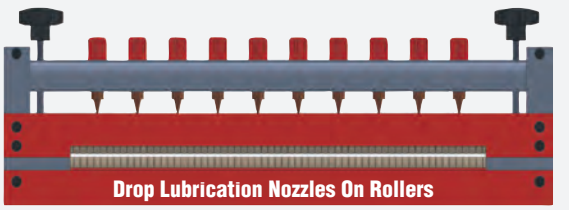




Order **RYS**

ROLLER, SHEET BAND LUBRICANTS

Sheet width capacity from 50 mm to 1600 mm



Standard Features :
* Thanks to local valves, partial lubrication on mobile sheet band.
* Industrial felt plates are available in lubricating roller.
* 3 lt. Capacity, Plastic Oil Chamber

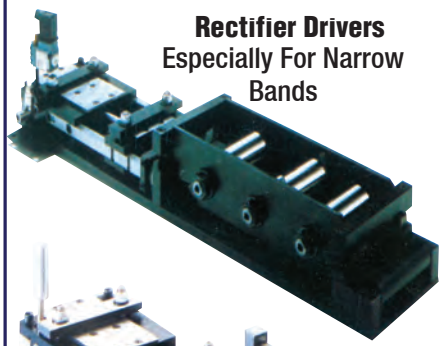
Optional (As per request) Features :
* Time Cycled Lubricating Relay
* Hydraulic Pump Tank
* Desired Oil Capacity

SHEET BAND CAN BE MOUNTED TO DRIVE SYSTEM EASILY

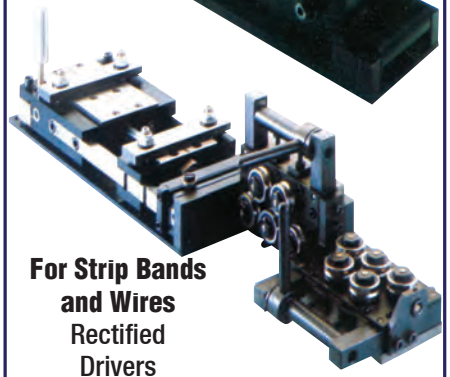
Order	Max. Band Width	Min. Band Thickness	Max. Band Thickness	Type
RYS 50	0.50 mm	1.0	2.0	Drop Roller Lubrication
RYS 100	0.100 mm			
RYS 150	0.150 mm			
RYS 300	0.300 mm	3.0	6.0	
RYS 500	0.500 mm			

Easier and faster production is obtained by lubricating band with drops while work piece / sheet product is switched between rollers in roller lubricating system press cutting and form mould processing operation. This system provides quality product without waste by increasing life time of mould. Band thickness can be adjusted from 0.1 mm to 6 mm sheet thickness.

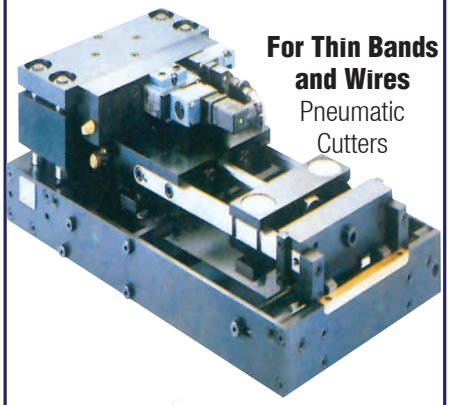
THE MOST SUITABLE AND HIGH PRECISION IMPORT DRIVER TYPES



Rectifier Drivers
Especially For Narrow Bands

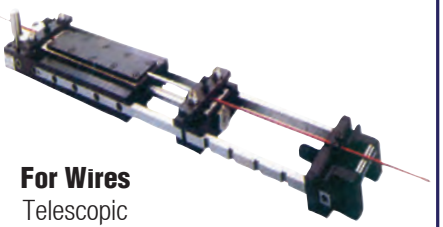


For Strip Bands and Wires
Rectified Drivers

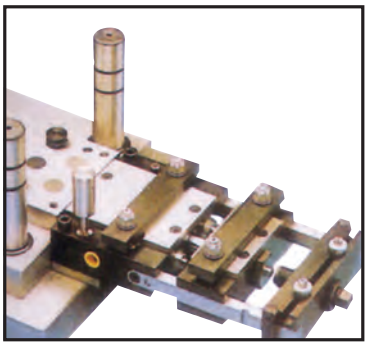


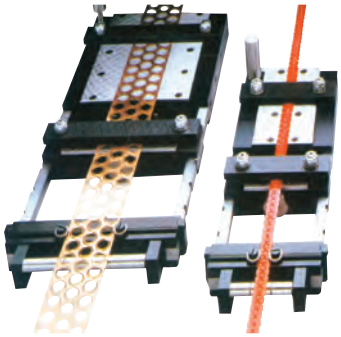
For Thin Bands and Wires
Pneumatic Cutters

For Very Thin Bands
Guide Channel Drivers



For Wires
Telescopic Drivers





High Precision PNEUMATIC DRIVERS

Import Herrblitz ITALY Rapid Type Drivers (Guaranteed Product)

Herrblitz Pneumatic Drivers
It is at your disposal with 120 Pieces Standard and Special Model as per request. They have been made in modular system, it is quite easy to obtain different dimensions, **normal drivers** are convenient especially for small bands, **they can be mounted directly on the mould.** Vertical motion of upper mould gives command to the driver, hence their mounting is so easy. **Heavy Duty Type Drivers** are very strong, they have three pulling cylinders.

Major Structural Features : Quality of Used Material; all surfaces exposed to impacts or friction are hardened and solid chrome plated, not to affect airborne water, valves and pistons are stainless steel, cylinder jacket are made from solid bronze.

Driving Sensitivity : Powerful front and rear Airbag ensure to work in 0.02mm sensitivity. At very powerful drivers there are 5 airbags at rear and 4 airbags at the front, hardness of airbags can be adjusted.

Wide Field Sliding - Bearing Plates : For feeding of special profiles, making bearing privately is possible. For magnetic bands or very precision bands, polyamide or especially hardened plates are applied.

Input Roller : By inserting roller driver input, friction on band can be decreased.
Slide Bearings: Hardened and Grinded bearings are used at our drivers. Pitch setting is so easy, you can use slots at slide edges in different stages. Accessories also superimposable to Herrblitz Drivers;
Guiding bars for very thin and precision materials enable to feed even 0.05 mm thick band by pushing.

Six roller motorless rectifier : Thanks to this application, you can obtain very practical and economic solution in rectifying bands and wires.

Pneumatic Length Cutting Machine For Bands and Wires : (Coupled to the driver). It provides to cut many different materials such as plastic, steel, paper etc. in the desired lengths.

Speed Setting and Control are electronic and its application is very easy. Special **Pliers :** For driving circular and special section profiles.

Pneumatic Valved Normal Type

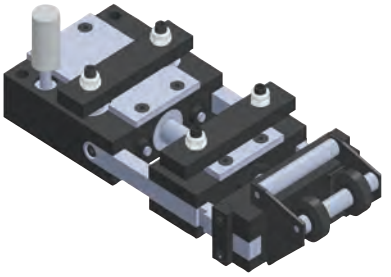
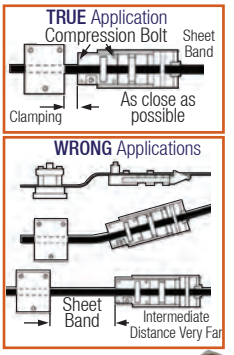
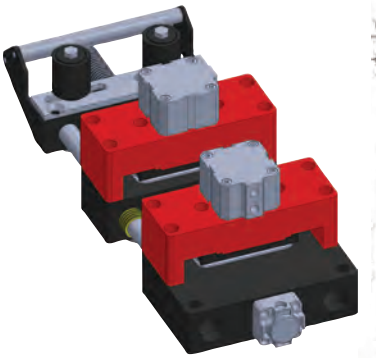
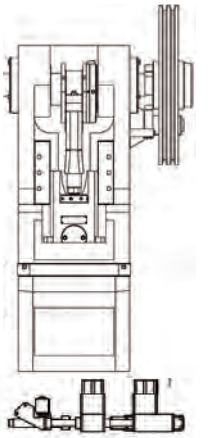
Standard Accessories ; O-Ring Kit
Optional Accessories ;
* Remote Control With Electro Valve (Instead of standard mechanic valve)
* Springy Plier (When pilot pins are used)
* Transparent Top Housing (To avoid accidents)
* Programmed counter to repeat pitch.
* Conditioner Unit and Hose Systems to filter pressured air and to lubricate.





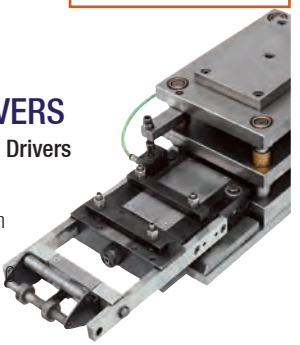




PNEUMATIC SHEET DRIVERS

Rapid Type (Domestic Production) Drivers

Economic Model



Sheet Band Width Capacity from 50 mm up to 150 mm.
Sheet sliding capacity at thickness from 2 up to 20 mm.

In Standard Features

* Manual Pitch and Speed Settings
* Mechanic Valve on Casing

In Optional

* Electronic Controlled Valve
* Stroke Repeater Unit

Standard Accessories

* O - Ring Kit of Driver
* 1/4 Conditioner (Air and Oil) Percolator
* Slide Air Valve 1/4 - Coupling
* 1.5 Meter 8's Air Hose

Domestic Type Pneumatic Drivers : The flatness of band to be driven in mechanic valve that can be mounted to press easily and **controlled drive from direct** press dect, should absolutely by watched, if required, rectifier should be used. Air inlet to the pneumatic driver should be dry and oily, conditioner system should absolutely be used. Lubricating for 30 minutes at conditioner is required. Spare part / repair / maintenance service are available at domestic drivers.

For precision and wasteless production roller sheet lubricant can be used.

HEAVY TYPE PNEUMATIC SHEET DRIVERS

Heavy Type (Domestic Production) ECONOMIC Drivers

Sheet Band Width Capacity from 100 mm up to 150 mm.
Sheet sliding capacity at thickness from 0.2'up to 1.0 /2.0 /3.0 mm, Pitch /Stepped Driver Casing from 100 mm up to 300 mm, Bearing Column from Special Aluminium Alloy Material, Movable Parts from solid chrome plated (1080) material, Bedding with bronze material, pitch set screw are produced from 4140 material.

SERVO (Easily Programmable) DRIVERS MEDIUM TYPE (Domestic Production)

Servo Drivers providing ideal solutions up to 1.5 mm sheet thickness **Economic Model**

Production up to 1000 mm as per request

They are servo drivers that can be mounted almost to every press, Space-saving, easily mounted, provide working opportunities at high stroke press and increase high efficiency thanks to price / performance.

Standard Features;

* Steel and 7075 Aluminium Casing Design
* 64 HRC Cylinder produced from 2379 Sverker Material and inertia taken (Relieved)
* Roller Structure bedding with high speed bearings
* Antiskid dual drive roller
* Band setting rollers on the inlet and outlet
* Unique measurement scale
* Piston leaving band to pilot during piloting
* PLC controlled lubricating system for 7075 custom made Trigel threadeds
* Mould protection system from 4 or 6 points
* Easy Connecting Plates to Press (Without drilling extra hole to press)
* Precision setting system taken press cran with encoder
* Mechanic roller lifting system
* 7.0 inch LCD Touch Colour Screen
* English menu programme
* Automatic Manual Button / Emergency Button

Optional (As per request) Features

* Roll unloader / Rectifier and Driver Press Synchron Movement External Encoder
* Foldable front rollers are preferred after 300 Cycles.
* Guides between driver and mould

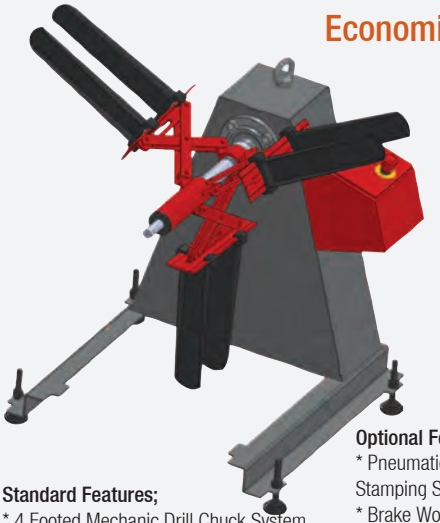
MECHANIC DRILL CHUCK ROLL OPENERS

Economic Product



Carrying capacity from 250 Kg. up to 3000 Kg.

Width capacity from 300 mm up to 1500 mm

Standard Features;
* 4 Footed Mechanic Drill Chuck System
* Independent Adjustable Side Thrus Legs
* Sensor LOOP Control System
* Bidirectional Operation

Optional Features;
* Pneumatic top and bottom Stamping System
* Brake Work System
* Speed Control System
* Conical Extrusion hub can be added as per request.

Horizantal Vertical Usage

HEAVY TYPE Pull - Push Fasteners

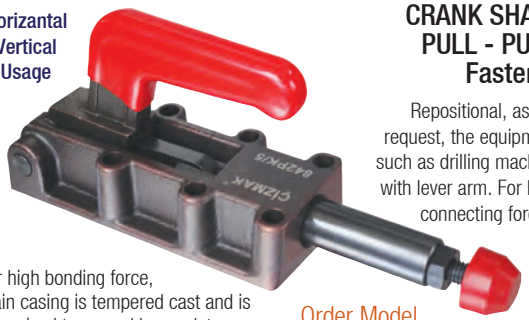
Crank shaft bound slide very robust construction.
Main casing from tempered casting.
As fast connecting /fast disconnecting and press - push coupling to serial production, it is excellent and very durable in drilling - reaming -grinding - bending - welding - mounting etc.

Order Model **842/SC** (5)

Crank Shaft and lever arm work in same direction.

Order 842/SC	(kN) Force		A	B		gr
	F1	F2				
5	3.0	3.0	166	190	M10X40	950

Horizantal Vertical Usage



CRANK SHAFT PULL - PUSH Fastener

Repositional, as per request, the equipment such as drilling machine with lever arm. For high connecting forces.

For high bonding force, main casing is tempered cast and is comprised tempered heavy duty type long shaft.

Order Model **842/PK** (5)

Order 842/PK	(kN) Force		A	B		gr

8	20 - 30		1.80	272 x470		120	Ø 63	16.8

DOUBLE ACTION PNEUMATIC PER. TYPE HORIZANTAL/ VERTICAL COUPLING

Order Model
600.. (2-3-4)

In double action pneumatic system, cylinder is mounted as ready to connect main plate, thanks to its angular structure it provides space saving in horizantal and vertical connection. It has double action pneumatic cylinder and equipped, with adjustable speed. Motion of cylinder piston is limited with magnetic sensors. Double action has mounted in exchangeable structure.

Order 600	kN Force F1	F2	F5	AxB	Air Inlet	Cylinder Strok	Piston	gr.
2	1 - 1.2		0.3	170 x130	M 5	42 mm	Ø 25	800

Mechanic Block

Order Model
825/CE
(4-6-8)

HEAVY DUTY PNEUMATIC PER. TYPE HORIZANTAL CYLINDER MOVABLE CONNECTED

Adjustable movement length cylinder. Piston can be limited with movable magnetic or pneumatic sensors. Hardened Steel, Grinded and shaft bolts fixed with safety rings.

Order Model
815/C (4-6-8)

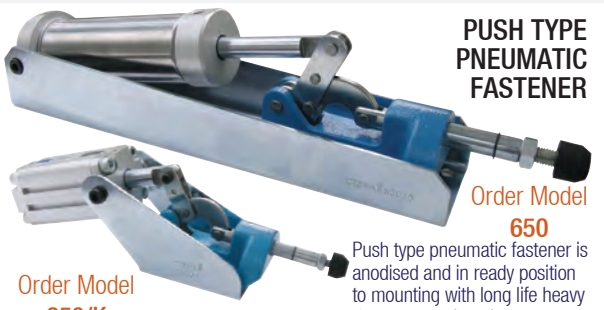
Order 825/CE	kN Force F1	F2	F5	Cylinder Strok	Piston	Kg
4	6 - 9		0.75	80 mm	Ø 40	5.5
6	12 - 18		1.00	100 mm	Ø 50	7.8
8	20 - 30		1.80	125 mm	Ø 63	17.80

Order Model
620/K (1-2-3-4)

Horizantal pneumatic fasteners is in bench quality, it can be intergrated to transfer lines or special machines. Its opening and closing can be controlled electronically. Double action, pneumatic cyclinder can be mounted replaceably.

DOUBLE ACTION PNEUMATIC HORIZANTAL TYPE MOTION CONTROLLED

Order 620/K	kN Force F1	F2	F5	Cylinder Strok	Piston	gr
1	0.8 - 1.1		0.10	52 x175	M5X30	34mm	Ø 16	610
2	1.0 - 1.2		0.30	64 x200	M6X35	41mm	Ø 25	870
3	1.4 - 2.5		0.50	85 x250	M8 45-65	52mm	Ø 32	1160
4	2.0 - 3.0		0.75	100 x290		62mm	Ø 40	1900



PUSH TYPE PNEUMATIC FASTENER

Order Model
650

Push type pneumatic fastener is anodised and in ready position to mounting with long life heavy duty pneumatic cylinders.

Order Model
650/K

Order 650	kN Force F1	F2	F3	Cylinder Stroke	Piston	Kg
3	4 - 2.5		0.75	85 x320	100 mm	Ø 40	2.0
5	10 - 5		1.00	115 x340	100 mm	Ø 50	3.5
7	25		1.00	150 x533	125 mm	Ø 63	7.7

Thanks to magnetic piston, motion control is ensured. Varnished heat threaded cast metal casing is galvanised and passivated. Steel arm and rod.

Order Model
620/Y (1-2-3-4)

IN DOUBLE ACTION PNEUMATIC HORIZANTAL CYLINDER STRUCTURE

Double action pneumatic cylinder is mounted replaceably, thanks to magnetic piston, motion control is provided. It is together with pressure bolt. Fasteners can be worked on control panel individually or together. In case of pressure loss, fastener remains the same. More than one coupling can be used simultaneously.

Order 620/Y	kN Force F1	F2	F5	Cylinder Stroke	Piston	gr

HOOK FASTENER

Order Model **850..** (3-4)

Robust hook fastener for higher holding forces. Hook length is adjustable. It is with thrust sleeve.

Order 850..	(kN) Force		B		gr
	← F1	Setting Range	A		
3	3.2	26	64	170	230
4	10	32	77	255	800

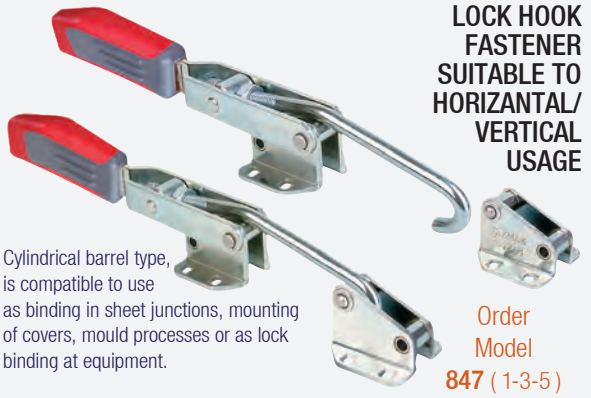
LOCK - HOOK NARROW FOOTED MODEL FASTENER

Order Model **847/K** (3)

Galvanised and Passivated Casing, Stainless Steel Riveted Hardened Hook and Thrust Bush for hardened and oiled bushes, conventionaloil resistant, plastic handle, hook arm can be shortened as partial motion.

Order 847/K	(kN) Force		A	B	gr
	F1	Setting Range			
3	2.0	-	38	242	295

LOCK HOOK FASTENER SUITABLE TO HORIZANTAL/ VERTICAL USAGE



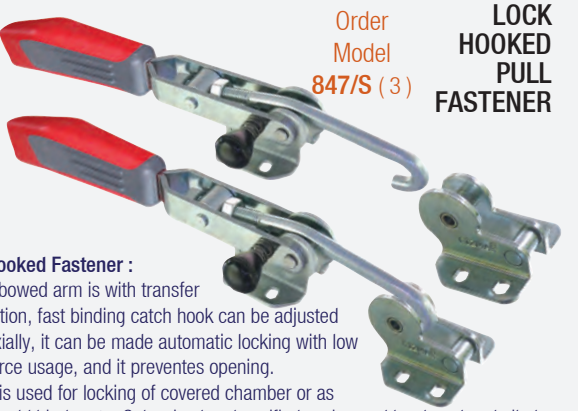
Cylindrical barrel type, is compatible to use as binding in sheet junctions, mounting of covers, mould processes or as lock binding at equipment.

Order Model **847** (1-3-5)

Order 847	(kN) Force		A	B	gr
	F1	Setting Range			
1	2.0	5	33	130	100
3	3.0	12	36	230	300
5	5.0	12	70	310	850

LOCK HOOKED PULL FASTENER

Order Model **847/S** (3)

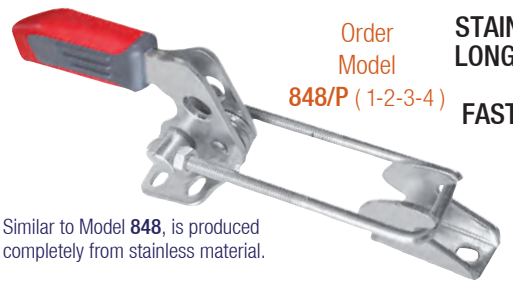


Hooked Fastener :
Elbowed arm is with transfer ration, fast binding catch hook can be adjusted axially, it can be made automatic locking with low force usage, and it preventes opening.
It is used for locking of covered chamber or as mould binder etc. Galvanised and pasified casing and hardened and oiled contra holder bushes are equipped with stainless steel rivets.

Order 847/S	(kN) Force		A	B	gr
	F1	Setting Range			
5	3.0	12	36	230	300

STAINLESS LONG TYPE HOOK FASTENER

Order Model **848/P** (1-2-3-4)

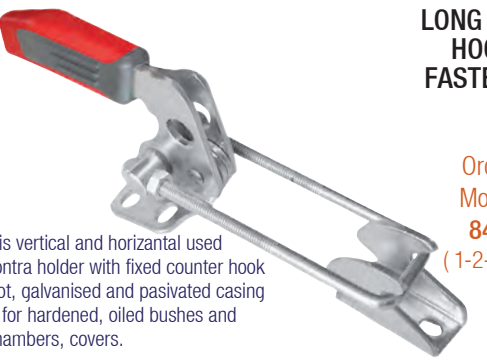


Similar to Model **848**, is produced completely from stainless material.

Order 848/P	(kN) Force		A	B	gr
	F1	Setting Range			
1	1.0	26	28	60	90
2	1.4	32	43	70	110
3	2.5	42	64	102	300
4	4.5	55	84	140	710

It can be used in chemistry / food sector and hygenic places, outdoors and at machines under heavy climatic conditions, it is anti magnetic resistant to corrosion and acide.

LONG TYPE HOOK FASTENER



Order Model **848** (1-2-3-4)

It is vertical and horizantal used contra holder with fixed counter hook slot, galvanised and pasivated casing is for hardened, oiled bushes and chambers, covers.

Order 848	(kN) Force		A	B	gr
	F1	Setting Range

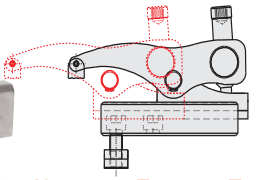
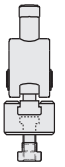
"T" CHANNEL SLIDE COMBINED LUG

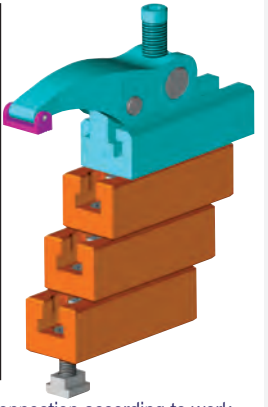




Order No : **1130 T - 1150 T - 1160 T**

"T" Channel Sliding Slide Combined Clamping Lug / Single Use Group

According to height status of work piece (mould), single connecting group can be selected. Its technical details is similar with Slide Combine Lug in Page 191.
For technical dimension, pls. refer to Page 191.
In our page, dual (bottom supported) connecting group data are available.



"T" Channel Sliding Combined Clamping Lug can make high dimensional connection according to work piece status by increasing slides at more higher work pieces in single unit (0 - 60 /62/80).

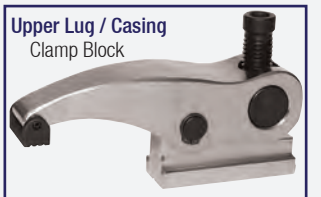
Slide is fixed, than upper casing is placed on slide and fixed.

Accoring to work piece dimension, distance is completed by increasing support slides.

Bottom slide is fixed to T Channel by making suitable to work piece.

Sliding Combine Slide Lug SPARE EQUIPMENT

Upper Lug / Casing
Clamp Block



Clamping Block:Forged Steel 42 CrMo
Hardened : 38 - 42 HRC

It is compatible with all systems in sliding combined connecting system.

Order No		Lug Height Motion h

SLIDING SLIDE THREADED SCREW CLAMPING LUG : The difference of this system from other kits, is that is prepared to mount to connecting system threaded screw machine table, other connecting forces and working system are similar. Its mounting and connecting system is as follows.

Model 1130 M; M12 - M16 Thread hole mounting is completed with Cylinder Head Cap Screw. Part Height Clamping Range: 0 - 60 mm. **1 Set Lug Clamping Force: 2000 kgf.**

Model 1150 M; M16 - M18 Thread hole mounting is completed with Cylinder Head Cap Screw. Part Height Clamping Range: 0 - 62 mm'. **1 Set Lug Clamping Force: 2500 kgf.**

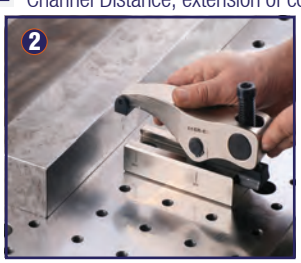
Model 1160 M; M20 - M22 - M24 Thread hole mounting is completed with Cylinder Head Cap Screw. Part Height Clamping Range: 20 - 28 mm. **1 Set Lug Clamping Force: 5500 kgf.**

According to work piece dimension and thread similarity in machine table, it is presented as optional model. Especially, it is preferred at mounting of injection moulds and press sheet moulds to machine. In addition it is quite useful and compact product in processing parts of machine tools.

Advantages : 2000 kgf - 5500 kgf Clamping force - Use in perforated plates - fixing in different position by sliding on slide - Clamping unsupported high and low distance by Cylinder Head Cap Screw - due to its practical structure, (Compact tool that has not protrusion part), it presents fast and easy connection .

Connection system having vertical effect bonding force- Stepless and Resistless Connection - Quick pull back of fastener - ensures fast and best access facility in work piece changement - By bridging hole or "T" Channel Distance, extension of connecting area (Strengthening) is provided.

Bottom slide is made suitable to work piece and fixed.



Upper casing is slided to slide, it is brought to position on work pieces.

Fix upper bolt of lug to work piece.

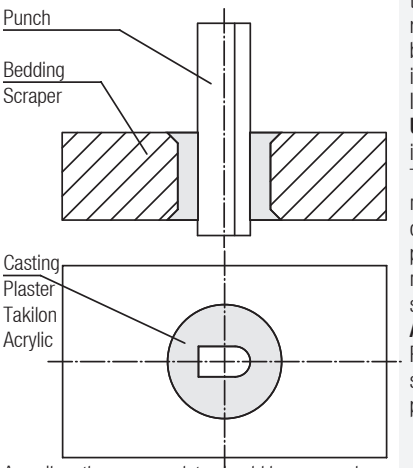
TAKILON - COLD ACRYLIC

Mould Repair, In Feeding / Filling

Mould : It is self hardening repair acrylic that is used in scraper and bedding plates, plastering gaps, cancelling of undesired holes as well as used for punch bearing in simple cutting and drilling moulds providing suitability at drilling and levelling processes done on filled surfaces.

Technical Data :

Mixing Ratio : 5 Unit Dosage - 3.5 Unit Liquid
Dosage : Dosing without measuring tank (As per requests)
Mixing : 30 - 35 Second (yoghurt consistency)
Working Time : At the end of 2 - 2.5 minutes
Hardening Time : In 15 minutes
Application : It should be castable consistency. Specified data are in 23^0C room temperature and from the beginning of
Order : TAKILON Acrylic Repair Filler
Large Model : 500 gr. Powder & 250 ml. Water
Small Model : 100 gr. Powder & 50 ml. Water



Any oil on the scraper plate should be removed. Use solvent (Release agentsilicon) to avoid sticking. Place the Scraper and the matrix correctly and connect to each other. the correct alignment is important for the operation. Using Magnetic 'V' Block for this operation guarantees vertikality. Or Setting Shims can be used to ensure the alignment for Punch Bush/Matrix. Later the surface finish works are done. The mixture solidifies and spoils if it is kept for too long.

POLINAT Component

Order :
Polinat 21

Electrical Insulation Casting and Model Filler

POLINAT - CASTING RESIN

It can be processed easily with turning leveling at mould and casting works.

Definition : Polinat 8021 is two component not-solvent, poliurethane base, electrical insulation and casting resine.
Specifications : Electrical imperviousness and dielectric constant number is high in different terms and various temperatures. It is resistant to abrasion, acid alkaline and other chemical or corrosive materials. It is hardened in low temperatures without changing any significiant volume. Thanks to catalyzers, drying time can be shortened.
Usage Areas : It is used in electric cable industry, casting of head and additional joints, insulating of end fasteners, plunger pump, insulator, transformers and various electrical component productions. In addition, it is used in all kinds of high voltage devices, transformers, television broadcast lines, telephone cord fasteners and rollers, to prevent flowing and leading in all kinds of condesators as well as to prevent noice that can be occurred Through resonance and vibration in devices such as ballast , regulator. It is suitable to complete filling in casting works at mould and machine sectors. It can be processed with turning levelling easily.
Usage: 2. component in upper section of box is emptied into main material in large box. Then, it is mixed until obtaning homogenous mixture. The surface to be applied is decontaminated from oil, dirt, rust and burrs, prepared mixture should be used in 30 40 minutes. If all of material is not used, sufficient mixture should be done.
Attention !!! : If breathed, R20 is harmful. R36 / 37 / 38 is irritant for eyes, respiratory system and skin. While working, use suitable protective clothing, gloves.

100 ml.
Luminescent
Paint

AZUL - MOULD EXERCISE PAINT

Blue Colour Limiting Paint as remarkable density , fast drying.

Blue oily mix liquid leaves a clear sign on any kind of metal, AZUL is indicated blue, bright sign on all metal parts that can be seen easily, This is coupled to show transfers and defects from another surface, it is ideal for marking surface. Due to its high cohesion feature, it can be easily transferred from one surface to another one. It can be used by mixing water. It can be cleaned from surfaces easily, before using, should be shake well and protected from cold.
Note: There is no need for extra precaution for respiration. For sporadic and typical use, vinyl gloves is sufficient. In long period use, rubber gloves should be used. It should be stored under room temperature.
Order : AZUL Exercise Paint

MOULD MARKING PAINT
MOULD EXERCISE PAINT

Mould marking and exercise paint is presented in 95 cc. and 115 cc. packing. It is quick dried in applied surfaces - after dried, it is not effected from oil, Drawing or exercise processes are continued on applied surfaces. Also, it has feature that is protected metal against rust (It drifts applied surface away).
Attention !!! : Burnable with fire
Order : 95 cc Marking Paint (Red) 95 cc Exercise Paint (Blue)
In addition, 115 cc packing is available.

ALCON (Thick / Thin) Exercise Paste
Double component (Thick - Thin) Exercise Paste

DRY PIGMENT PAINT
It is 400 gr, thinned with oil and is provided coloured view in exercise processes.
